Hand-Book of Washington.

THE SEAT OF GOVERNMENT.

THE object of this little volume is simply to supply Strangers, who may visit the National Metropolis on business or pleasure, with all the information of a local character, calculated to be of service to them. But before proceeding with details, it will be proper to give the leading facts connected with the establishment of the present Seat of the General Government. The idea of locating it on the Potomac was originally suggested by General George Washington, after long and mature deliberation, and the Act of Congress, which created the territory of the District of Columbia, was passed on the 16th of July, 1790;— in the Senate by a vote of 14 to 12; and in the House of Representatives of 32 to 29. The law provided, however, that the Government should not be removed from Philadelphia to Washington until the year 1800, and that the intervening

time should be employed, under the direction of Commissioners appointed for the purpose, in preparing suitable buildings at the latter point for the accommodation of Congress, and of the President, and for the Public Offices. The quantity of land set aside for National purposes was one hundred square miles, forming a square of ten miles, and spanning the Potomac River at the head of ship navigation: and the States which ceded to the Nation the necessary portions of their domain were Maryland and Virginia. The corner-stone of the District of Columbia was laid at Jones' Point, near Alexandria, on the 15th April, 1791, by Daniel Carroll and David Stuart, with all the Masonic ceremonies usual at that time; and the corner-stone of the Capitol was laid, with similar honors, by General Washington, on the 18th September, 1793. The design of the city was executed by Major L'Enfant, under the direction of Washington himself; and the streets were chiefly laid out by A. Ellicott, and two gentlemen by the name of King. The limits of the city extend from north-west to south-east, about four miles and a half, and from east to south-west about two miles and a half. The streets, which vary from seventy to one hundred and ten feet in width, run from north to south, and from east to

west, crossing each other at right angles, with the exception of fifteen noble avenues, which point to that number of States, which were the first to enter the Union. The soil of Washington City and surrounding country is generally of a light clay or sand, and is cultivated at considerable expense; and while bilious and intermittent fevers prevail in certain localities in the fall of the year, as a general thing the place is as free from epidemical diseases as any other in the country. Laid out as the city was, on an extensive scale, there is always a free circulation of wholesome air, and the best of water is to be found in all directions. The climate, for many years past, has been becoming gradually more moderate and salubrious than it was in the olden times, and upon the whole may be pronounced as agreeable and healthy as that of any other section of the United States. The circumference of the city according to Mr. Watterson is 14 miles, the aggregate length of streets 199 miles, and of the avenues 65 miles. The avenues, streets, and open spaces, contain 3,604 acres; and the public reservations, 10, 11 and 12, since disposed of for private purposes, 513 acres. The whole area of the squares of the city amounts to 131,684,176 square feet, or 3,016 acres; one-half of which, 1,508 acres, was re-

served for the use of the United States, and the remaining half assigned to the original proprietors; 1,536 acres belonged to the United States.

A more beautiful site for a city could hardly be obtained. From a point where the Potomac, at a distance of 295 miles from the ocean, and flowing from north-west to south-east, expands to the width of a mile, it extends back upon a level plain, hemmed in by a series of gradually sloping hills terminating with the heights of Georgetown; the plain being nearly three miles in length, from east to west, and varying from a quarter of a mile to two miles in breadth. It is bounded on the east by the Eastern Branch of the Potomac, where are now the navy yard and congressional cemetery, and on the west by the Rock Creek, which separates it from Georgetown. The small stream from the north, over which the railroad bridge now passes, on entering the City, emptied into a bay or inlet of the Potomac about 400 feet wide, which jutted in from the west, to within a quarter of a mile of Capitol Hill, and nearly divided the plain. Not far from the head of this, and south of Capitol Hill, a small stream took its rise in a large number of springs, and emptied into the river, at a place now called Greenleaf's Point, formed by the intersection of

the Eastern Branch with the Potomac, and was known as James Creek. There is a stream above Georgetown which has always been called Goose Creek; but, from a certificate of a survey now preserved in the mayor's office, at Washington, dated 1663, it appears that the inlet from the Potomac was then known by the name of Tiber, and probably the stream from the north emptying into it bore the same name; so that Moore did injustice to the history of the place, and confounded streams, when he wrote the well-known line;

“And what was Goose Creek once, is Tiber now.”

By the same survey, it appears that the land, comprising Capitol Hill, was called Rome, or Room, two names which seemed to have foreshadowed the destiny of the place. Mr. Force, of Washington, suggests that they probably originated in the fact that the name of the owner of the estate was *Pope*, and, in selecting a name for his plantation, he fancied the title of “Pope of Rome.”*

The Commissioners reported that the public buildings would be ready for the reception of the government in the summer of 1800. Accord-

* Joseph B. Varnum.

ingly, the Executive were, in the month of June in that year, removed from Philadelphia to Washington, and Congress commenced its session there on the third Monday of November following. On this occasion in his opening speech, President Adams said:—"I congratulate the people of the United States on the assembling of Congress at the permanent seat of their government; and I congratulate you, gentlemen, on the prospect of a residence not to be exchanged. It would be unbecoming the representatives of this nation to assemble for the first time in this solemn temple without looking up to the Supreme Ruler of the universe, and imploring his blessing. It is with you, gentlemen, to consider whether the local powers over the District of Columbia, vested by the Constitution in the Congress of the United States, shall be immediately exercised. If, in your opinion, this important trust ought now to be executed, you cannot fail, while performing it, to take into view the future probable situation of the territory, for the happiness of which you are about to provide. You will consider it as the capital of a great nation, advancing with unexampled rapidity in arts, in commerce, in wealth, and in population, and possessing within itself those resources which, if not thrown away, or

lamentably misdirected, will secure to it a long course of prosperity and self-government."

The Senate in their reply said:—"We meet you, sir, and the other branch of the national legislature, in the City which is honored by the name of our late hero and sage, the illustrious Washington, with sensations and emotions which exceed our power of description."

The House of Representatives in reply, said:—"The final establishment of the seat of national government, which has now taken place in the District of Columbia, is an event of no small importance in the political transactions of our country. Nor can we on this occasion omit to express a hope that the spirit which animated the great founder of this city, may descend to future generations; and that the wisdom, magnanimity, and steadiness, which marked the events of his public life, may be imitated in all succeeding ages. A consideration of those powers which have been vested in Congress over the District of Columbia, will not escape our attention; nor shall we forget that, in exercising those powers, a regard must be had to those events which will necessarily attend the capital of America."

THE STREET DIRECTORY.

THE street plan of the city of Washington is symmetrically arranged for the convenience of facilitating distant points. There are 1170 blocks or squares, bounded by 22 avenues, ranging from 130 to 160 feet in width, named, as far as they go, after the different States; and 100 streets, from 70 to 100 feet in width, running north and south, and crossed at right angles by streets running east and west, except where the avenues intersect, forming a considerable rectangular or circular open space, which, when the city is built up, will give it an open appearance.

The Capitol is the division of the streets, which are alphabetically and numerically named. The streets running east and west are designated by letters, having the words north or south affixed to them, according as they are situated north or south of the Capitol, as A street north, A street south, which is the first street north or south of the Capitol. The streets running north and south are designated by numbers, having the words east or west affixed to them, according as they are situated east or west of the Capitol also, as 1st

street east, 1st street west. Thus duplicate streets run parallel with each other, but differ only by having north or south, and east or west attached.

The avenues run diagonally across the streets. Three of these avenues intersect at the Capitol and three at the President's House, and an additional one, Pennsylvania. This grand thoroughfare is very fine, being spacious, regular, and beautiful, running the whole length of the city, from the Eastern Branch to the Rock Creek, embracing in its long stretch the Capitol, President's House, and numerous other objects of interest, which is a noble feature, worthy of the admiration so universally bestowed.

THE POTOMAC RIVER.

Which passes along the District, is one of the broadest, and in several respects the most beautiful in the United States. It has its rise in the Alleghany mountains. This river, after a meandering course of about 400 miles, falls into the Chesapeake Bay, about 100 miles below its head.

THE CAPITOL.

This building is situated on the western portion of an area enclosed by an iron railing, and embracing many acres. It is so elevated as to command a view of the entire City of Washington, the heights of Georgetown, the windings of the Potomac and the City of Alexandria.

The central part of this whole edifice—the old wings and center becoming the center of the new—was commenced in the year 1793, with Mr. Hallet as architect, who was succeeded in that capacity by Mr. Hadfield, Mr. Hoban, and Mr. Latrobe. During the Embargo and the accompanying war, the work was suspended, and as the British subsequently demolished much of what had been accomplished by the above named gentlemen, the Government in 1815 found it necessary to reconstruct it; and this portion of the building was finished chiefly under the superintendence of Mr. C. Bulfinch.

The exterior exhibits a rusticated basement of the height of the first story, the two other stories are comprised in a Corinthian elevation of pilasters and columns; these columns which are thirty feet in height form an advancing portico on the east, one hundred and sixty feet in extent, the

EAST FRONT OF THE CAPITOL WITH THE EXTENSIONS.
WASHINGTON.

Deutsches Institut
für Länderkunde
München

center of which is crowned with a pediment of eighty feet span, while a receding loggia one hundred feet in extent, distinguishes the center of the west front.

The corner-stone of the extension was laid by President Fillmore, on the 4th of July, 1851, with masonic ceremonies, on which occasion the Hon. Daniel Webster delivered a brilliant oration.

The extension and new dome was designed by the able Government architect, Mr. T. U. Walter, and built under the Government superintendents, Messrs. Meigs, Franklin, and West.

The new wings are each three hundred and twenty-four feet in length, from east to west including porticos and steps, by one hundred and fifty-two feet eight inches from north to south also including porticos, and are connected to the main building by corridors, each forty-four feet in length and fifty-six feet in width, making the entire length of the building from north to south seven hundred and forty-five feet and eight inches. The top of the building is surrounded by a balustrade of stone, and covered with a lofty dome in the center. The whole cost, including the grounds surrounding it, will amount to, when completed, perhaps, over \$12,000,000.

In further describing the Capitol we shall speak of its various leading features separately, and in the following order: The new Senate Chamber, the new Hall of Representatives, the Rotunda, the Congressional Library, the Chamber of the Supreme Court (old Senate Chamber), the Court of Claims, the old Hall of Representatives, the new Dome, together with the Capitol grounds.

THE NEW HALL OF REPRESENTATIVES.

THE new Hall of Representatives is 139 feet long, 93 feet wide, and 36 feet high.

It is in form a parallelogram, with galleries on either side, affording room for 1200 persons, comfortably seated. Upon the floor are seats for 260 Representatives, arranged upon a semicircular plan, the seat and desk of the Speaker of the House being at the center of the semicircle, and in the middle of the south side of the Hall, which is one of the longer sides of the room.

The ceiling is of cast iron, with large skylights. The skylights are glazed with an ornamented glass, having in the center of each skylight the arms of a State or Territory, emblazoned in colored glass.

The room is lighted at night by means of about

HALL OF REPRESENTATIVES.

1500 jets of gas, which are placed above the glass of the ceiling, and which throw down a soft and agreeable light, scarcely to be distinguished from that of a bright day.

The area of this room is 12,927 square feet. It contains 465,372 cubic feet of space. About five thousand persons could stand in it if crowded, as is not uncommon in public meetings.

The room is ventilated by numerous openings in the walls and floor, through which air, warmed in cold weather, by steam pipes in the basement, is forced by a revolving fan of sixteen feet in diameter. This fan is driven by a steam engine, and is capable of supplying one hundred thousand cubic feet of air per minute, and thus of renewing the whole of the air in the Hall every five minutes.

This engine and fan are placed in the cellar under the northwest corner of the south wing of the Capitol. The steam pipes, of which ten miles are used, in order to be able at any time, in the severest weather, to control the temperature of the Hall, are placed in a room behind the western stairway of the south wing.

The boilers are in vaults under the western terrace, outside of the building. These things are well worth a visit, and the persons em

ployed by the House to manage them and keep them in order, will always be found ready and obliging in giving any information or explanation in regard to them.

The decoration of the Hall is yet far from complete. Panels on the gallery fronts have been provided, which it is expected will be filled with pictures of American History, under the orders to be given by Congress; and the upper part of the walls is filled with niches, empty as yet, but which will, at some future day, be tenanted by the effigies in marble of our worthiest citizens.

The walls and ceiling of the Hall have been richly colored, and, when the panels are filled with paintings, and the niches with statues, the room will have a much more finished appearance. At present, the design of the architect being incomplete, the effect he arrived at can scarcely be appreciated.

Deutsches Institut
für Länderkunde
Bücherei

SENATE CHAMBER.

THE NEW SENATE CHAMBER.

The new Senate Chamber is built on the same general plan as that of the Representative Chamber. It is in the north wing, on the center of the second or principal floor. Like the other, it is ceiled with iron and glass, lighted from above, and surrounded by galleries, under which are cloak and hat and dressing rooms for the use of Senators.

The style of decoration is rich, but in lighter color than those used in the Representative Hall.

The lighting, heating, and ventilation are arranged upon the same general plan as those of the House

The size of the room is 80 feet 7 inches by 113 feet 3 inches; the height is 36 feet. The galleries seat comfortably 1200 persons.

The heating and ventilating apparatus is under the southwest corner of the north wing, and approached by a small staircase under the principal western stairway. The boilers are under the exterior western terrace.

The heating apparatus and fan are arranged on a similar plan to that employed in the House.

And here it occurs to us, we ought to mention a few of the regulations which appertain to the Senate Chamber and the Hall of Representatives during the sessions of Congress. The gentleman whose duty it is to preside in the former is the Vice-President of the United States; but the Speaker of the House is elected to that position from its own body, and serves during all the sessions of one Congress. The only persons, besides members, admitted to the floors of the two chambers, are the President and his Secretary, the Heads of the Departments and Bureaus, the Diplomatic Corps, all Governors of States, and all the ex-members of Congress, ex-Presidents and ex-Governors, &c. &c.; as a privilege however, the members can in person convey any friend to a seat in the lobby of the Senate or House. The regular business hours in the legislative halls during the sittings of Congress, are from 12 to 3 o'clock; but when there is a pressure of business, towards the close of a session, it is customary to sit both day and night,—for many hours continuously. Both houses of Congress are abundantly supplied with competent officers and clerks, under whose management all things usually go on like clock-work, and to any of whom every stranger may apply with perfect propriety for

what information respecting the Capitol they may reasonably desire.

The next interesting feature of the Capitol that we would describe is the Rotundo. It occupies the centre, and is ninety-six feet in diameter, and the same number of feet high. The dome is hemispherical and filled with large plain caissons; the room in its circuit is divided into eight panels, intended for paintings, all of which are already filled; and stationed between these panels are four bas relievos of historical subjects; one representing the *Preservation of Captain Smith by Pocahontas*, one the *Landing of the Pilgrims on Plymouth Rock*, one the *Conflict between Daniel Boone and the Indians*, and the other *Penn's Treaty with the Indians*. In addition to these specimens of sculpture are also displayed, encircled with floral wreaths, the heads of *Columbus*, *Raleigh*, *La Sale*, and *Cabot*;—all these productions of the chisel being from the hands of *Causici* and *Capellano*.* Of the paintings four are by *Col. John Trumbull*, one by *Weir*, one by *Vanderlyn*, one by *Chapman*, and one by *Powell*. The subjects of Trumbull's pictures are first, the

* In niches on the outside of the east door are also two statues of colossal size representing *Peace* and *War*, from the chisel of *Persico*.

“*Declaration of Independence*,” the essential object of which was to preserve the portraits of the men who were the authors of that Declaration. As Col. Trumbull was one of the *aids* of General Washington in the Revolutionary War, he had the best of opportunities for obtaining the portraits from the living men, and the consequence is that we have authentic likenesses in this picture of the following personages :

- 1.—George Wythe, Virginia.
- 2.—William Whipple, New Hampshire.
- 3.—Josiah Bartlett, New Hampshire.
- 4.—Benjamin Harrison, Virginia.
- 5.—Thomas Lynch, South Carolina.
- 6.—Richard Henry Lee, Virginia.
- 7.—Samuel Adams, Massachusetts.
- 8.—George Clinton, New York.
- 9.—William Paca, Maryland.
- 10.—Samuel Chase, Maryland.
- 11.—Lewis Morris, New York.
- 12.—William Floyd, New York.
- 13.—Arthur Middleton, South Carolina.
- 14.—Thomas Hayward, South Carolina.
- 15.—Charles Carroll, Maryland.
- 16.—George Walton, Georgia.
- 17.—Robert Morris, Pennsylvania.
- 18.—Thomas Willing, Pennsylvania.
- 19.—Benjamin Rush, Pennsylvania.
- 20.—Elbridge Gerry, Massachusetts.

- 21.—Robert Treat Payne, Massachusetts.
- 22.—Abraham Clark, New Jersey.
- 23.—Stephen Hopkins, Rhode Island.
- 24.—William Ellery, Rhode Island.
- 25.—George Clymer, Pennsylvania.
- 26.—William Hooper, North Carolina.
- 27.—Joseph Hewes, North Carolina.
- 28.—James Wilson, Pennsylvania.
- 29.—Francis Hopkinson, New Jersey.
- 30.—John Adams, Massachusetts.
- 31.—Roger Sherman, Connecticut.
- 32.—Robert R. Livingston, New York.
- 33.—Thomas Jefferson, Virginia.
- 34.—Benjamin Franklin, Pennsylvania.
- 35.—Richard Stockton, New Jersey.
- 36.—Francis Lewis, New York.
- 37.—John Witherspoon, New Jersey.
- 38.—Samuel Huntington, Connecticut.
- 39.—William Williams, Connecticut.
- 40.—Oliver Wolcott, Connecticut.
- 41.—John Hancock, Massachusetts.
- 42.—Charles Thompson, Pennsylvania.
- 43.—George Reed, Delaware.
- 44.—John Dickinson, Delaware.
- 45.—Edward Rutledge, South Carolina.
- 46.—Thomas McKean, Pennsylvania.
- 47.—Philip Livingston, New York.

The second of Trumbull's pictures represents the "*Surrender of General Burgoyne.*" To the intelligent spectator it will tell its own story, and we shall therefore content ourselves with simply

giving the names of those distinguished officers whose portraits appear upon this canvas, which are as follows :

- 1.—Major Lithgow, Massachusetts.
- 2.—Colonel Cilly, New Hampshire.
- 3.—General Starke, New Hampshire.
- 4.—Captain Seymour, Conn., of Sheldon's horse.
- 5.—Major Hull, Massachusetts.
- 6.—Colonel Greaton, Massachusetts.
- 7.—Major Dearborn, New Hampshire.
- 8.—Colonel Scammell, New Hampshire.
- 9.—Colonel Lewis, Q. M. G., New York.
- 10.—Major-General Philips, British.
- 11.—Lieutenant-General Burgoyne, British.
- 12.—General Baron Reidesel, German.
- 13.—Col. Wilkinson, Deputy Adj't General, American.
- 14.—General Gates.
- 15.—Colonel Prescott, Massachusetts Volunteer.
- 16.—Colonel Morgan, Virginia Rifleman.
- 17.—Brigadier-General Rufus Putnam, Massachusetts.
- 18.—Lt. Col. John Brooks, late Governor of Mass.
- 19.—Rev. Mr. Hitchcock, Chaplain, Rhode Island.
- 20.—Major Robert Troup, Aid-de-Camp, New York.
- 21.—Major Haskell, Massachusetts.
- 22.—Major Armstrong, Aid-de-Camp, now General.
- 23.—Major-General Philip Schuyler, Albany.
- 24.—Brigadier-General Glover, Massachusetts.
- 25.—Brigadier-Gen. Whipple, New Hampshire Militia.
- 26.—Major Matthew Clarkson, Aid-de-Camp, New York.
- 27.—Major Ebenezer Stevens, Massachusetts, Commanding the Artillery

The third of the Revolutionary paintings represents the "*Surrender of the British Army, commanded by Lord Cornwallis, at Yorktown, in Virginia.*" This picture contains the portraits of the principal officers of America, France and England, and their names are as follows:

- 1.—Count Deuxponts, Colonel of French Infantry.
- 2.—Duke de Laval Montmorency, Colonel of French Infantry.
- 3.—Count Custine, Colonel of French Infantry.
- 4.—Duke de Lauzun, Colonel of Cavalry, French.
- 5.—General Choizy.
- 6.—Viscount Viomenil.
- 7.—Marquis de St. Simon.
- 8.—Count Fersen, Aid-de-Camp of Count Rochambeau.
- 9.—Count Charles Damas, Aid-de-Camp of Count Rochambeau.
- 10.—Marquis Chastellux.
- 11.—Baron Viomenil.
- 12.—Count de Barras, Admiral.
- 13.—Count de Grasse, Admiral.
- 14.—Count Rochambeau, Gen. en Chef des Francais.
- 15.—General Lincoln.
- 16.—Col. Ebenezer Stevens, of the American Artillery.
- 17.—General Washington, Commander-in-Chief.
- 18.—Thomas Nelson, Governor of Virginia.
- 19.—Marquis La Fayette.
- 20.—Baron Steuben.
- 21.—Colonel Cobb, Aid-de-Camp to Gen. Washington.
- 22.—Colonel Trumbull, Secretary to Gen. Washington.

3

Deutsches Institut
für Länderkunde
Bücherei

- 23.—Major-General James Clinton, New York.
- 24.—General Gist, Maryland.
- 25.—General Anthony Wayne, Pennsylvania.
- 26.—General Hand, Adjutant General, Pennsylvania.
- 27.—General Peter Muhlenberg, Pennsylvania.
- 28.—Major-Gen. Henry Knox, Commander Artillery.
- 29.—Lieut. Col. E. Huntington, Acting Aid-de-Camp of General Lincoln.
- 30.—Col. Timothy Pickering, Quarter Master General.
- 31.—Col. Alexander Hamilton, Com'dg Light Infantry.
- 32.—Col. John Laurens, of South Carolina.
- 33.—Col. Walter Stuart, of Philadelphia.
- 34.—Col. Nicholas Fish, of New York.

The fourth and last of Trumbull's paintings represents the "*Resignation of General Washington at Annapolis*;" and the following named portraits are here collected:

- 1.—Thos. Mifflin, Pa., President, Member of Congress.
- 2.—Charles Thompson, Pennsylvania, do.
- 3.—Elbridge Gerry, Massachusetts, do.
- 4.—Hugh Williamson, N. Carolina, do.
- 5.—Samuel Osgood, Massachusetts, do.
- 6.—Ed. McComb, Delaware, do.
- 7.—George Partridge, Massachusetts, do.
- 8.—Edward Lloyd, Maryland, do.
- 9.—R. D. Spaight, North Carolina, do.
- 10.—Benjamin Hawkins, N. Carolina, do.
- 11.—A. Foster, New Hampshire, do.
- 12.—Thomas Jefferson, Virginia, do.
- 13.—Arthur Lee, Virginia, do.

- 14.—David Howell, Rhode Island, Member of Congress.
 15.—James Munroe, Virginia, do.
 16.—Jacob Reid, South Carolina, do.
 17.—James Madison, Virginia—(Spectator.)
 18.—William Ellery, Rhode Island, Member of Congress.
 19.—Jeremiah Townley Chase, Maryland, do.
 20.—S. Hardy, Virginia, do.
 21.—Charles Morris, Pennsylvania, do.
 22.—General Washington, do.
 23.—Col. Benjamin Walker, Aid-de-Camp.
 24.—Col. David Humphreys, do.
 25.—General Smallwood, Maryland, Spectator.
 26.—Gen. Otho H. Williams, Maryland, do.
 27.—Colonel Samuel Smith, Maryland, do.
 28.—Col. John E. Howard, Baltimore, Md., do.
 29.—Charles Carroll and two daughters, Md., do.
 30.—Mrs. Washington and 3 grand children, do.
 31.—Daniel, of St. Thomas Jenifer, Maryland, do.

The subjects of the remaining pictures in the Rotundo are the "*Embarcation of the Pilgrims from Leyden*," by Weir, the "*Landing of Columbus*," by Vanderlyn, the "*Baptism of Pocahontas*," by Chapman, and "*Discovery of the Mississippi by De Soto*," by Powell. As these illustrate scenes connected with the very earliest history of our country, none but the leading figures are to be considered in the aspect of authentic portraits, and we therefore deem it unnecessary to particularize the various personages delineated. And as

our object in this book is simply to give facts, it cannot be expected that we should play the part of a critic, and we shall therefore leave to the spectator the rare privilege of forming his own opinion, not only of the pictures, but of every thing else that we may describe.

We now come to speak of the Congressional Library which was, before the fire of 1851, one of the chief attractions of the Capitol. The principal Room, of which there were three, faced the west, and was a large and handsome affair, ninety-two feet long, thirty-four wide and thirty-six high: divided into twelve alcoves, ornamented with fluted pilasters; and in every direction were displayed portraits and busts, cases of medals and other interesting works of art. The number of volumes which it contained was about 50,000, and the Catalogue, which was arranged on the system of Lord Bacon, comprised the following table of chapters: Ancient History, Modern History, of all the countries of Europe, Asia, Africa, and America, American Newspapers, Ecclesiastical History, Natural Philosophy, Agriculture, Chemistry, Surgery, Medicine, Anatomy, Zoology, Botany, Mineralogy and Conchology, Occupations of Man, Technical Arts, Ethics, Religion, Common Law, Reports in every department of Learn-

ing and Legislation, Politics, Mathematics, Astronomy, Geography, Fine Arts, and all the Standards in Polite Literature, with many valuable Original Manuscripts. The original Library, which was collected under the direction of Mr. Gallatin and Mr. Mitchell, in 1800, was destroyed by fire during the last war, and that which lately enriched the Capitol, was founded upon one which was purchased by Congress, in 1814, of Thomas Jefferson, for \$23,000.* So much for the past. We would now describe the Congressional Library as it is and will be when entirely completed. It will embrace, when the two wings of the Capitol are completed, the entire western projection of the present Capitol; and while the main room is 91 feet long, 34 wide, and 38 high, the second and third are each 29 feet wide by 70 long, and of the same height as the preceding. These rooms are all fitted up with iron cases, and iron ceilings, roofed with copper, laid on iron rafters, and lighted by ornamental sky lights. In addition to the above there are also two smaller rooms opening therefrom, which are employed by the Senators and Representatives as reading and conversation

* The yearly average increase is about 1,800 volumes. The sum of \$5,000 is annually appropriated by Congress for Miscellaneous Books, and \$1,000 for Law Books.

rooms. Of the books in the old library, some 20,000 were saved, while the special appropriations of Congress have been so liberal that a large part of the works destroyed, excepting the valuable manuscripts, have been replaced. The main library room, as it now appears, embraces the space occupied by the old library before the fire. On both sides of the room are three stories of iron cases, each nine feet six inches in height. The lower story consists of alcoves projecting eight feet six inches into the room, with cases on each side of the projections. The second story has similar alcoves, excepting that their projection is but five feet, which bears a platform of three feet six inches in width, resting on the cases below, and which constitutes a commodious gallery. A similar platform is constructed on the alcoves of the second story, forming a gallery to approach the upper cases; thus making three stories, receding as they ascend. These galleries are continued across the ends of the room, where they are supported by massive brackets. The alcoves are nine feet eight inches in width, with an ornamented pier forming the head of each projection. The architraves which cross the alcoves are finished with shields, crowning bands and ornaments. The shields are designed as tablets to

receive the names of the general subjects on which the book in the respective alcoves treat. The galleries are all floored with cast iron plates, and protected by pedestals and railings; they are approached by two semi-circular stairways of cast iron, recessed in the end walls of the room. The ceiling is wholly composed of iron; it is suspended from strong iron trusses, which likewise constitute the support of the roof; it rests on twenty-four massy consoles, ornamented with foliage, fruits, and scrolls. Each of these consoles weighs nearly a ton. Their projection from the face of the walls is five feet six inches, their height five feet four inches, and their width twenty-one inches. The entire ceiling is divided into deeply sunken panels, and embellished with ornate mouldings and foliated pendants. The room is lighted, in addition to the five windows in the western front, by eight sky-lights, in the ceiling, each six feet square, filled in with ornamented glass, and protected by an upper sky-light of seventy-seven feet in length by ten feet six inches in width, placed on a corresponding angle with the roof, and covered with thick plates of glass. The roof is covered with copper, secured by copper wire to the iron rafters. It is heated by hot water pipes.

The affairs of the Library are indirectly in

charge of a Library Committee, consisting of members from the two houses of Congress, but the immediate superintendants are a Librarian and two assistants. The public in general are privileged to visit the Library and examine books on the spot, but members of Congress and the officers of the Executive Departments are all who enjoy the privilege of taking away any books that they may desire. The Library is open every day during the sessions of Congress, and during the recess on Tuesdays, Thursdays, and Saturdays of each week, from 9 o'clock until 3.

There is a law library attached to the Congressional Library, which is located in the basement, under the Supreme Court room; at one time the Supreme Court held its sessions in this room.

This library contains many rare and valuable works on the various departments of law.

The books of this library are frequently referred to by the Judges of the Supreme Court, the Court of Claims, and the members of the bar, as well as by members of both Houses of Congress. It contains about 18000 volumes.

SUPREME COURT ROOM.

The apartment for the accommodation of the Court is in the old Senate Chamber, which was fitted up in 1860. It is in the second story, north of the Rotunda, of a semicircular form seventy-five feet long and forty-five high. The walls between small pilasters of marble placed in the circular wall are painted, and the whole surmounted by a dome ceiling enriched with square caissons. A screen of Ionic columns with capitals support a gallery to the east, forming a loggia below. The justices occupy a row of elevated seats along the front of the loggia in their official capacity, clothed in black silk gowns or robes; and the members of the bar are accommodated with seats and desks in the body of the room. The bench of the Supreme Court, as it now stands, is composed of ten Judges, who assemble annually in Washington on the second Monday in January.

ROOMS OF THE COURT OF CLAIMS.

These rooms are on the first floor of the Capitol, immediately under the Congressional Library, and were fitted up in the spring of 1858 for the occupation of the Court. It is composed of five Judges.

THE OLD HALL OF REPRESENTATIVES

Is in the second story leading to the south wing, of a semicircular form ninety-six feet long and sixty feet high, and surrounded with twenty-four columns of variegated Potomac marble with capitals of white Italian of the Corinthian order. The dome is painted in imitation of that of the Pantheon of Rome, and just below the dome, under a sweeping arch extending from east to west, is placed a model of a colossal figure of liberty in plaster by Causica. On the entablature beneath the figure is sculptured in stone the American eagle, in the act of taking wing, executed by Valaperti. Immediately over the main entrance stands a statue in marble representing History recording the events of the nation. She is placed on a winged car, rolling around a globe, on which are delineated the signs of the Zodiac, and the wheel of the car is the face of the clock.

THE NEW DOME.

The old Dome of the Capitol was built of wood. The outer and inner shells were not concentric, and while the inner was, in proportions, a copy

of that of the Pantheon of Agrippa at Rome, though much inferior in size, the outer dome was higher in proportion than that of the Pantheon.

Its inflammable nature, and its narrow escape at the time the library was burnt, in 1851, called attention to it, and it was finally resolved to replace it by a Dome of iron, entirely fire-proof.

The new Dome, in its proportions, resembles the modern rather than the antique structures of this character. Instead of the low and flat outlines of the Pantheon of Rome, and the Saint Sophia of Constantinople, we see in the design a light structure, decorated with columns and pilasters, rich cornices and entablatures, springing up towards the sky, and supporting, at the height of three hundred feet above the ground of the eastern square, and 372 feet above the western gate of the park, a colossal statue of Freedom in bronze, from the studio of the lamented Crawford.

The interior diameter of the Dome is 96 feet. The height from floor of rotunda to the ceiling, which closes it in, is 220 feet in the clear.

Galleries at various heights will afford fine views of the interior and of the exterior. The views stretching many miles down the Potomac.

The structure is double and between the exte-

rior and interior shells, a staircase winding spirally around the whole, affording access to the very summit.

The general outline of this structure resembles that of the Dome of St. Peter's of Rome; of St. Paul's of London, and of St. Genevieve and the Invalides of Paris, and of the last great work of the kind erected in modern times, that of the Russian National Church, the Cathedral of St. Isaac's at St. Petersburg, which is also partly built of iron.

The interior diameter of the Dome is as above stated 96 feet. The exterior diameter of the peristylian circular colonnade is 124 feet 9½ inches. The height of the whole 300 feet above the ground, or 230 feet above the roof of the Capitol.

The height of the statue of Freedom, which surmounts the pinnacle of the mighty dome, is 20 feet. It is a bronze cast executed by Mr. C. Mills. The design of this figure was the last inspiration of the lamented Crawford.

It represents a female in a royal robe dress; for a head dress an eagle with spread wings. Her right hand grasps the hilt of a sword, its point reaching to the feet; her left hand holds a wreath over a shield.

In addition to the apartments of the Capitol already specified, it should be mentioned that there are also a large number of ordinary, but well furnished rooms, which are occupied by the Vice-President, the Speaker of the House, and other Officers, by the Postmasters of Congress, the Public Documents, and the Committees of the two Houses.

In regard to the Capitol Grounds we have only to say, that they are not only extensive, but are kept in the very neatest order, constituting one of the very pleasantest and most popular resorts for promenading to be found in the Metropolis. They command most charming prospects of the surrounding country, are adorned with a great variety of American trees, fountains and basins of pure water enliven them in various parts, and an air of superior refinement is given to them, by a number of pieces of statuary, the most attractive specimens being a statue of Washington, by Greenough, and the figures of Columbus and an Indian Woman, by Persico, with his statues of Peace and War, the former occupying the centre of a square east of the Capitol, and the others appropriate places on the eastern portico. On this side of the Capitol, moreover, is to be seen

the lately completed colossal group of Statuary, called *Civilization*, executed by the lamented Greenough. It was finished in 1851, and occupied the artist eight years, besides a delay of four years, occasioned by his not being able in all that time to obtain a block of Serravezza marble suitable to his purpose. It consists of four figures, a mother and child, an American Indian and the father. The object of this group is to illustrate a phase in the progress of American Civilization, viz: the unavoidable conflict between the Anglo-Saxon and aboriginal savage races.

The group of statuary placed in the pediment of the portico on the east front of the north wing of the Capitol was designed by the late Mr. Crawford, the American sculptor. This statuary was executed on the Capitol grounds by artists employed on the Capitol extension.

The whole group represents "America as it was and as it is." Facing the statuary, that portion on the right of the central figure exhibits "America as it was;" that on the left "America as it is."

The central figure represents the Goddess of Liberty. The first figure to the right of her in

Deutsches Institut
für Länderkunde
Bücherei

PRESIDENTS HOUSE

"America as it was," is the Backwoodsman, the pioneer of civilization; the second a boy and his dog, returning from hunting; the third an Indian chief, bowed in grief; the fourth an Indian mother with her babe, ignorant of the fate of its race; the fifth an Indian grave, ready to receive the remaining savages of the forest. The first figure to the left of her in "America as it is," is a soldier in the Continental costume; the second a merchant of our day seated on a cotton bale; the third two youths ascending the hill of science; the fourth a teacher and youth; the fifth a mechanic; the sixth an anchor and sheaves of wheat.

THE EXECUTIVE MANSION.

The plan of this building was made by James Hoban, and the corner-stone was laid on the 13th of October, 1792; but having been partially destroyed during the last war, the same architect was employed to rebuild it in 1815. It is situated at the "west end" of the city, at the intersection of Pennsylvania, New York, Connecticut, and Vermont Avenues. It occupies the centre of a plat of ground containing twenty acres, and at

an elevation of forty-four feet above the waters of the Potomac. For several years past the grounds both in front and in the rear of the President's House have been in a neglected condition, but under the management of competent persons the grounds lying south of the Mansion are being transformed into a magnificent park, which when completed, will afford a fine carriage drive of three or four miles, the Potomac at one end, and the Capitol at the other; the Smithsonian Institute and the Washington Monument being situated in its midst. Besides this, the same persons are planning the improvement of La Fayette and Franklin Squares into fine pleasure grounds. In the centre of La Fayette Square has been placed Mr. Mills' colossal equestrian statue of General Jackson.

The Mansion in question is 170 feet front and 86 deep, is built of white freestone with Ionic pilasters comprehending two lofty stories of rooms, crowned with a stone balustrade. The north front is ornamented with a lofty portico, of four Ionic columns in front, and projecting with three columns. The outer inter-columniation is for carriages to drive under, and place company under shelter: the middle space is for those visitors who come on foot; the steps from both leading to

Deutsches Institut
für Länderkunde
Bücherel

EAST ROOM IN THE PRESIDENT'S MANSION

a broad platform in front of the door of entrance. The garden front is varied by having a rusticated basement story under the Ionic ordonnance, and by a semi-circular projecting colonnade of six columns, with two flights of steps leading from the ground to the level of the principal story.

The interior arrangements of the Executive Mansion are of course elegant and convenient, well adapted to the various purposes for which the building was designed; and as the rooms, both public and private, are newly furnished with the coming in of every new Administration, we deem it unnecessary to trouble the reader with elaborate descriptions. All the public rooms may be examined by strangers at any time, but His Excellency the President can only be seen during those hours which he is pleased to designate. During the sessions of Congress the President usually has two reception evenings, on which occasions the public at large are privileged to pay him their respects and promenade the famous East Room. In addition to this it is generally expected of him that during each winter he will entertain at dinner all the members of both Houses of Congress and the Diplomatic Corps, so that official dinners, have to be given by him as often as twice a week. The grounds immediately

around the Mansion are quite beautiful in themselves, but they present a particularly fine appearance during those summer afternoons when the citizens of Washington assemble there by hundreds and thousands for the purpose of enjoying the music of the Marine Band and the pleasures of a fashionable promenade.

In the centre of the small square immediately in front of the President's House, stands a bronze statue of Thomas Jefferson, executed by whom we know not, but presented to the Government by Capt. Levy of the United States Navy, the present proprietor of Monticello, the former abode of Mr. Jefferson. It is a handsome piece of statuary, and in its present position has quite a commanding appearance. A resolution of acceptance however, was never passed by Congress, so that this statue may be considered as still the private property of Capt. Levy. Directly across Pennsylvania Avenue from the above mentioned square, is La Fayette Square, which, as before intimated, has recently been laid out in fashionable style, and planted with new shrubbery. Mills' Equestrian Statue of General Jackson, occupies its centre, and is a work of superior merit. It is in bronze, and was cast from certain cannon captured by General Jackson in some of his military en-

gements. The cost of this statue was \$50,000, and a duplicate was ordered to be executed for the city of New Orleans, which commission has been duly executed by the successful artist.

THE EXECUTIVE DEPARTMENTS.

THE number of these is seven, and their official titles are as follows: the Department of State, the Treasury Department, the War Department, the Navy Department, Department of the Interior, the Post Office Department, and the office of the Attorney General.

The STATE DEPARTMENT, which stands northeast of the President's House and within the same enclosure, is a plain brick building, two stories high, 160 feet long and 55 wide, with a broad passage on both floors, and containing in all 32 rooms. It contains a handsome library of books, maps and charts, numbering perhaps some 15,000 distinct works, which are indispensable in the performance of the extensive and varied duties of the department. In addition to this collection, the Copyright Bureau contains some 10 or 12,000 volumes published in this country, which are kept with care as part and parcel of the archives of the

Government. The total number of persons employed in this Department consist of the Secretary, nineteen clerks, two messengers, and five watchmen. It is the department through which alone the diplomatic corps and all foreigners can hold any intercourse with the Government of the United States, and is of course the head-quarters of all the American Ministers and Consuls. And in this place it may be well to mention the countries which were represented in Washington at the commencement of the present year by accredited ministers, which were as follows: Russia, Argentine Republic, Spain, Chili, Mexico, Brazil, Great Britain, France, Portugal, Prussia, Denmark, Austria, Netherlands, the two Sicilies and Parma, Sardinia, Belgium, Chili and Peru. With regard to American Ministers and Consuls, it were enough to say, that they may be found scattered to the four corners of the earth, in every place where they would be likely to do good. In this department are deposited all our Treaties with foreign powers, the original of the Declaration of Independence, the commissions given to General Washington with many of his most interesting letters, and also one of the most complete files of newspapers to be found in the country, all of which

U. S. TREASURY

II d et ce an in st th ha or T co al is pa ta su sic fif go Al ing be bu ate

may be examined by strangers, on application, during office hours.

The TREASURY DEPARTMENT stands at the eastern extremity of the President's Square, (so called) and is a stone edifice, painted white, 340 feet long and 170 wide, but when the northern and southern wings are added it will be 457 feet in length. In front is an imposing colonnade, stretching the entire length of the building, and the architect of the whole was Robert Mills. It has three floors upon which business is transacted, on each of which are nearly fifty apartments. This is the department where all the financial and commercial affairs of the country are attended to, and the amount of labor performed here at times is immense. The persons employed in this department are the Secretary, one Assistant Secretary, two Comptrollers, six Auditors, two Treasurers, one Register, one Solicitor, one Commissioner of Customs, about three hundred clerks, fifteen messengers, and twelve watchmen. A good legal library is attached to this department. An extensive addition to this already large building is now in course of erection, and it is only to be regretted that such a costly and imposing building should not have attached to it appropriate grounds.

The WAR DEPARTMENT building occupies the north-west corner of the President's Square, and is precisely similar in design to the State Department. It is the head-quarters of all the officers of the Army, and the main-spring of all the military movements. This department comprises in its economy the War Office proper, the Quartermaster's Department, the Engineer's Department, Bureau of Topographical Engineers, Ordnance Office, Subsistence Department, Pay Department, Medical Department, Office of Adjutant General and the head-quarters of the Major General or military Commander-in-Chief of the Army. The number of persons employed in this department exclusive of the Secretary and Officers of the Army is as follows:—clerks, 92; messengers, 10; and watchmen, 5. Besides the many accomplished and distinguished officers connected with the departments already mentioned, are those also employed in the field, belonging to the 1st and 2d Regiments of Dragoons, to the Regiment of Mounted Riflemen, to the 1st, 2d, 3d and 4th Regiments of Artillery, and to the 8th Regiment of Infantry. The War Department is furnished with a valuable library of some 10,000 volumes, where may be seen, by the curious in such matters, an interesting collection of American medals

Engr'd on Steel by H. Metzger

U. S. PATENT OFFICE.

and a great number of war trophies from the battle fields of the Revolution, of the last war and of Mexico.

The NAVY DEPARTMENT building lies directly west of the President's House, and in the rear of the War Department. It has five Bureaus, exclusive of the Secretary's office, viz:—Bureau of Navy Yards and Docks, Bureau of Construction, Equipment and Repair; Bureau of Provisions and Clothing, Bureau of Ordnance and Hydrography, and Bureau of Medicine and Surgery. Besides the Secretary, the persons employed in them, are forty-two clerks, and seven messengers. Scattered throughout this department are to be seen authentic portraits of many of our naval heroes, also a collection of medals struck to their honor at different times, together with a large collection of national flags and other trophies which have fallen from time to time into the possession of our commodores.

The DEPARTMENT OF THE INTERIOR, or Home Department is the most extensive connected with the Government. The building which it occupies is one of the most extensive and most interesting in the Metropolis. A portion of it is occupied by the Patent office, and also by the museum of the National Institute. The titles of the Bureaus

connected with the Interior Department are as follows:—Land office, Patent office, Indian office and Pension office. Exclusive of the Secretary and the Heads of the Bureaus, the persons employed are clerks, about one hundred and fifty, messengers and watchmen, about twenty-five. As its name indicates, this department has to do exclusively with all those matters bearing upon the internal economy of the United States, and is of course increasing in importance with every successive year. A library of some five thousand volumes is attached to this Department. In the second story of the building now occupied by the Patent office are the invaluable relics of Washington, including his camp chest, the original Declaration of Independence, the gifts presented from time to time to the Government by foreign powers, Franklin's printing press, a collection of Indian portraits by King, the treasures of the National Institute, interesting memorials of the late James Smithson, and the extensive and rare treasures secured by the U. S. Exploring Expedition under Capt. Wilkes, in almost every detail. (All removed to the Smithsonian Institution.) Everything here is open to the inspection of the public, and the Hall is one of the most interesting for the stranger to visit, to be found in the

Deutsches Institut
für Länderkunde
Bücherei

U. S. GENL POST OFFICE.

Metropolis. In the first story of the same building are collected all the models of the machines which have been patented since the foundation of the Government. From the Patent office have emanated a number of interesting documents bearing directly upon the mechanical and agricultural interests of the country, and a large quantity of seeds, domestic and foreign, are annually distributed gratis to all persons who choose to profit by the liberality of the Government.

One of the handsomest buildings in Washington is that occupied by the POST OFFICE DEPARTMENT. It was designed and built by Mr. Mills, of white marble and after the Corinthian order. It is three stories high, two hundred and four feet long, and one hundred and two deep: it contains twenty-seven rooms on each floor, making eighty-one in all. It occupies a central position in the city, near the Department of the Interior, both of which are about half a mile from the President's Square and the other departments. The employees are a Postmaster-General, three assistants, fifty clerks and six messengers. Connected with this department is the Dead Letter office which is an interesting place to visit. The number of unclaimed letters annually sent here is enormous. All the letters received are

opened by the clerks, and only read when found to contain money or other valuables, after which they are all consumed.

The city Post Office is an unpretending building adjoining the General Post Office on seventh street.

With regard to the OFFICE OF THE ATTORNEY GENERAL, which we have classed with the Executive branches of the Government, we have only to say that it derives its chief attraction from the person who may occupy it, who must be of necessity, a man of distinguished ability. Rooms are assigned to him in the Treasury building, and it is to him that all knotty questions, in all the departments, are submitted for final settlement. Within a few years past the power to appoint all marshals and district attorneys has been transferred from the Department of State to this office.

THE NATIONAL OBSERVATORY.

THE National Observatory is situated on the banks of the Potomac, in an oblique direction from the President's House, towards Georgetown. The site is a beautiful one, having a commanding view of Washington and Georgetown, of the

Copyright secured

OBSERVATORY.

Deutsches Institut
für Länderkunde
Bücherei

Potomac River, and surrounding country, as far down as fort Washington, opposite to Mount Vernon.

It is a Naval Institution under the control and management of Captain J. M. Gilliss, U. S. N. The force employed at it consists principally of Naval Officers.

Besides the Astronomical duties of the establishment, here are kept all the nautical books, charts and instruments belonging to the Navy.

The apartment in which the Chronometers are kept is a very interesting one. Before one of these instruments is purchased by Government, it is required to be put on trial by the Superintendent of the Observatory, for one year; during which period it is compared daily with the Great Astronomical Clock of the Observatory, which regulates the time for the whole City. The temperature of the room in which it is kept is also carefully observed, and recorded every day. The test is a severe one, and in case the instrument fails to come up to it, it is returned to the maker at the end of the year.

The observations on the temperature in connexion with the performance of the Chronometer, enable the maker to improve the instrument, and

on a second trial of another year it rarely fails to pass.

There are from 60 to 100 Chronometers always in this room, all of which are daily wound and compared and treated in the manner described. Thus a complete and minute history is kept of each one.

Here also are conducted the celebrated researches connected with the "Wind and Current Charts;" the habits of the Whale, and a variety of phenomena connected with the great deep.

The National Observatory of Washington occupies a high rank among the Observatories in the world, there being but one—that of Russia—superior to it.

The largest telescope, called the Equatorial, is a 14 feet Refractor, with an object glass of 9 inches. It is mounted in the revolving dome on the top of the main building, and is so arranged with clock work and Machinery, that being directed to a star in the morning, it may be left alone, when on returning to it in the evening, it will have followed the path of the star so exactly, that it will be found still pointing to the star, and the star will be visible through it. With its powers the stars are visible at mid-day.

In one room below are the Meridian and Mural

Circles. In another, the Transit instrument; in another, the Prime Vertical Instrument; and in another yet, the Great Refraction Circle invented by the Superintendent. It was made by Ertel & Son, Munich, and taken altogether is, perhaps, one of the finest instruments any where to be found. Such is the delicacy of its construction, and such the accuracy of its adjustments, and the nicety of its performance, that the heat of the observer's person, as he approaches it to make an observation, is found to be one of its principal sources of error.

But perhaps the most wonderful object at this interesting Establishment is the Electro-Chronograph, invented by Dr. Locke, of Cincinnati.

It is in the room with the Transit Instrument, and is so arranged, by its connexion with an electrical battery in the building, that its ticks may be heard in any part of the country to which the magnetic wires lead, provided they be put in connexion with it. Thus it may be made of itself to record the time, and in such a manner, that the astronomer in Boston, New Orleans or elsewhere will know it, and tell the time of day by this clock, as well as one who stands before it and reads the hands on its face.

The Observatory regulates the time for Wash-

ington and Georgetown by the falling of a ball. At ten minutes before mean noon every day, a large black ball is hoisted to a flag staff, standing on the top of the dome. This is to give warning for those who wish to get the *exact* time of day to look out. Precisely at twelve, the ball drops. Thus the whole City is informed of the exact time.

John Q. Adams, who was a devoted friend of the Observatory, and who used to visit it frequently in the last days of his life, has been known to walk all the way up to the Observatory from his lodgings, to see the ball fall.

The Office hours at this Establishment are from 9 A. M. to 3 P. M.—within those hours, visitors will always find an officer ready to receive them and to show them every attention that politeness can bestow.

THE WASHINGTON ARSENAL.

THE Arsenal occupies a fine position on the extreme southern point of the City, (called Greenleaf's Point,) at the junction of the Eastern Branch with the Potomac, commanding a beautiful and extensive view, over a broad expanse of water, towards the Cities of Washington and

U. S. ARSENAL

Bücherei

Georgetown on the North and Alexandria on the South. The channels of both rivers running near the Arsenal shore, afford all requisite facilities for receiving and shipping Ordnance and other Military Stores.

Although this site was originally reserved for the purpose of an Arsenal, it was not occupied by any building of importance until after the peace of 1814, when the building of the present establishment was commenced under the direction of the late Col. George Bomford. From the small square embraced in the first plan the buildings have been gradually extended until they occupy nearly the whole reservation, and form one of the principal Arsenals of Construction in the United States.

The work-shops contain much useful and ingenious Machinery, propelled by Steam, for manufacturing Gun Carriages and Equipments for Artillery, and for preparing ammunition of all kinds. Among these may be noticed particularly the Machines for planing and boring iron and wood, those for tenoning and mortising the spokes and hubs of wheels. Blanchard's ingenious lathe for turning irregular forms in wood, such as spokes, axe handles, &c., the machinery for making leaden Bullets by pressing them out of the bar lead

instead of casting them; and above all, the beautiful machine for making and charging Percussion Caps, for small arms, invented by Mr. George Wright, a workman at the Arsenal. By this last mentioned machine, a sheet of Copper being inserted on one side and some percussion powder put in a hopper on the other, the finished Caps are produced without any further agency of the workman

In the spacious Storehouses of the Arsenal are to be seen Arms and Equipments for the troops; also a large number of Gun Carriages and other apparatus for the service of the Artillery in the forts and in the field, from the ponderous Columbiad for the defence of the coast, to the little mountain howitzer, which may be transported, with its miniature smith's forge, on the back of a mule.

The MODEL OFFICE contains a collection of models or patterns of the various arms and military Equipments used in our Service, and also of such of those used in the Armies of other nations as have been obtained by the Ordnance Department. Here may also be seen some specimens of old and new inventions, repeating Arms, Revolvers, &c., which have been suggested, at home or abroad, by the organ of destructiveness.

In the *Gun lot* are arranged many pieces of Ordnance and piles of Balls, mostly of heavy calibre for the armament of the forts.

In front of the old Arsenal Square a small collection of foreign Brass Cannon will attract the notice of the visitor, who will perceive by the inscriptions that some of them are trophies of the success of our Arms at Saratoga, Yorktown, Niagara, and Vera Cruz. The Guns and Carriages of Duncan's Field Battery, which performed distinguished service on nearly every field of battle in the Mexican War, are likewise preserved at the Arsenal, as a saluting battery.

On the West side of the Arsenal Grounds, near the river, are two pyramidal structures which often attract the curiosity of visitors and of persons passing by the Arsenal. These buildings contain an apparatus called a Ballistic Pendulum, which is used for testing the force of Gunpowder when fired in heavy Ordnance, and also for trying many other interesting experiments in Gunnery.

THE NAVY YARD.

THE Navy Yard is situated on the Eastern Branch or "Anacostia," a branch of the Potomac river, at the southern termination of Eighth street, East. It was established in the year 1800, on the public reservation No. 14, to which Squares No. 883 and 884 were subsequently added. Commodore Tingey was ordered to the command, and to him was assigned the duty of superintending the construction of the several vessels ordered to be built here, and also the general arrangement of the grounds, with a view to furnishing increased accommodation for the future construction and equipment of large Ships of War.

The area covers about twenty acres, and is enclosed by a substantial brick wall, having a principal entrance at the foot of Eighth street, through a handsome arched gateway, designed by the late celebrated architect, Benjamin H. Latrobe, Esq.

Several comfortable residences have been erected for the accommodation of the Commodore, the Executive officer, the first Lieutenant, Surgeon, Sailing-master, Boatswain and Gunner, whose official duties require their constant attendance in the Yard.

The mechanical operations of this Establish-

ment are various and extensive, and the skill of the workmen and the excellence of the materials employed have been satisfactorily tested in every sea. Anchors of all sizes, for the Naval service, are manufactured by the use of two heavy steam-hammers, (termed the "Nasmyth Hammer,") one of which weighs 3,600 pounds, the other 2,240 pounds. The forges for this work are kept in blast by a fan blower attached to the steam engine in the Machinist's department. There is also in operation, in the Anchor department, a Direct Action Steam-hammer (called the "Kirk Hammer,") in connexion with a blast furnace for working up, into blooms and bars, all the scrap iron of the Navy. The massive chain cables, are made in another Shop, which is provided with a powerful Hydrostatic Press for testing their strength. These cables are highly esteemed for their superior finish, great strength and durability. From sixty to eighty men are ordinarily employed in this department.

Another department is engaged in the manufacture of Galleys, Cabooses, and copper Powder-tanks, and of the various kinds of brass work appertaining to Ships of War. The different machines employed in making these articles, are driven by a Steam Engine of about fifteen horse

power. A Brass Foundry is connected with this range of buildings, on the eastern side of the Yard.

A large and extensive Iron Foundry has recently been erected, of sufficient capacity and with the necessary facilities for moulding and casting the heaviest work; connected with this foundry are the machines for boring, turning and planing the Steam Cylinders and other massive machinery required for the Naval Service. Adjoining the Iron Foundry are the Ordnance and Boiler-making departments, which are provided with a Steam Engine of about twelve horse power. The Ordnance department is engaged in the fabrication of light brass Ordnance, Howitzers for boat and land service, of Shot and Shells, Percussion Caps, Musket and Pistol Balls, &c. Some of this machinery is very ingenious and highly interesting. The Boiler Shop contains all the machinery necessary for the construction of Boilers.

Close by this range of buildings, is a very extensive Machine Shop, in which are placed all the tools required in the manufacture of Steam Engines and machinery of every description. When completed it will afford room for the employment of from one hundred and fifty to two hundred workmen. Attached to this Shop is an

engine of sixty horse power, which also gives motion to the Blockmaking machinery and to the Fan-blowers of the Anchor-making department.

On the Western side of the Yard is the Pyrotechnical Laboratory, in which are prepared all the articles for the Navy appropriate to this department.

A Rolling Mill is also here which is furnished with an engine of two hundred horse power, together with the necessary machinery for manufacturing all the bolt, sheathing, brazier's and boiler copper for the use of the Navy; also, a Rolling apparatus, &c., for working up the bloom iron, made by "Kirk's Faggoting Hammer," into bolts and bar iron

There are two large Ship Houses, for building Ships, under one of which is about to be constructed a Marine Railway for hauling up steamers, for repair.

In the Yard there are ordinarily employed from four hundred to four hundred and fifty Mechanics and laborers, but since the keel of the frigate *Minesota* was laid the workmen employed in the yard have averaged about twelve hundred. The grounds are beautifully laid out; the avenues shaded with fine trees; the plats neatly enclosed, and the whole preserved in handsome order.

THE SMITHSONIAN INSTITUTION.

THIS Institution was founded upon a bequest of more than half a million of dollars, made to the United States by an Englishman named James Smithson, a man of good family, and of sufficient learning to have published in the Transactions of the Royal Society and other Journals no less than twenty-four scientific treatises, the majority of which were on Mineral Chemistry. The object of the bequest, according to his will, was "To found at Washington, under the name of the Smithsonian Institution, an Establishment for the increase and diffusion of knowledge among men." On the 1st of July, 1836, Congress solemnly accepted this important trust, and the money was paid into the Treasury of the United States in 1838. The Act of Congress establishing the Institution as it now exists, was passed in 1846. By this Act, the President, Vice President, all the Members of the Cabinet, the Chief Justice, the Commissioner of the Patent Office and the Mayor of Washington, during the time for which they should hold their offices, were made the *personnel* of the Institution; and they are to be assisted by a Board of Regents, who were to be

SMITHSONIAN INSTITUTE.

Deutsches Institut
für Länderkunde
Bücherei

empowered to elect a Chancellor, a Secretary, and an Executive Committee.

The Institution is situated on the Mall below the Capitol, and though the edifice is yet in an unfinished state, it presents a noble appearance, and is unquestionably one of the great attractions of the Metropolis. The style of the Architecture is the Romanesque, the material a reddish free-stone of fine grain, its extreme length is four hundred and fifty feet, its width one hundred and forty feet, and it has nine towers varying in height from seventy-five to one hundred and fifty feet. The grounds which surround it are very extensive, and are now in progress of being beautified by Mr. Downing.

The Secretary of the Institution is *Professor Joseph Henry*, who has the reputation of being one of the most accomplished scientific men of the age, and the property of the Institution and its general operations are in his charge, and among his assistants are several gentlemen of high scientific and literary acquirements.

To describe minutely the interior economy of this important establishment is not our intention in this place. We can only say that its beneficial influence upon the world at large has already been felt; it has already printed and circulated a

number of valuable volumes, acquired collections in the way of natural history and scientific as well as general literature which are very valuable and very interesting, and engaged distinguished men to deliver lectures. The great library room when completed will be capable of holding one hundred thousand volumes. The building is supplied with a lecture room, which will seat twelve hundred persons; and its Museum, when completed, will be two hundred feet long, and filled with the wonders of nature and art from all parts of the world; its rooms for Chemical experiments will be more spacious and convenient than any to be found in the country: and in the western wing which is one hundred and twenty feet long, will hereafter be located a gallery of Art. The collection of Indian pictures now on exhibition there is the property of Mr. Stanley the artist.

THE WASHINGTON MONUMENT.

As this Structure is not yet finished, we will not describe it as it is, but as it will be when completed, according to the design adopted by the Board of Managers. It stands on the Mall, between the President's House and the Potomac,

Deutsches Institut
für Länderkunde
Bücherei

WASHINGTON MONUMENT.

and embraces the idea of a grand circular colonnaded building two hundred and fifty feet in diameter, one hundred feet high, from which springs an obelisk shaft seventy feet in diameter at the base and five hundred feet high, making a total elevation of six hundred feet.

The vast rotundo, forming the grand base of the Monument, will be surrounded by thirty columns of massive proportions, twelve feet in diameter and forty-five feet high, elevated upon a base of twenty feet in height and three hundred feet square, surmounted by an entablature twenty feet high, and crowned by a massive balustrade fifteen feet in height. The terrace outside the colonnade will be twenty-five feet wide, and the walk within the colonnade twenty-five feet. The front portico will be adorned with a triumphal car and Statue of the Illustrious Chief; and over each column around the entire building will be sculptured escutcheons, coats of arms of each State of the Union, surrounded by bronze civic wreaths, banded together by festoons of oak leaves, while the centre of the portico will be emblazoned with the coat of arms of the United States. Around the rotundo will be stationed statues of the Signers of the Declaration of Independence: in niches prepared for the purpose, statues of the Fathers

of the Revolution contemporary with Washington; and directly opposite to the entrance will be placed a statue of Washington himself. The interior of the shaft will be embellished with a great variety of inscriptions; at one point it will be ornamented with four of the leading events of Washington's career sculptured in *basso relievo*, above which will be placed a single star, emblematic of the glory which the name of Washington has attained; and in the centre of the Monument will be placed the Tomb of the Father of his country.

THE NATIONAL MEDICAL COLLEGE.

THE National Medical College, instituted in 1823, is now in successful operation. It was until a few years past known as the medical department of the Columbian College, from which institution it derives its authority to confer Degrees under an act of incorporation from the Congress of the United States.

In assuming its present name it was newly organized, and its facilities for instruction greatly extended.

It is situated at No. 453 14th street, between F and G streets.

THE COLUMBIAN COLLEGE.

THIS Institution, which was incorporated in 1821, is beautifully situated on an eminence, adjoining the City Corporation on the North, and on 14th street West. It is a fine brick edifice, four stories high, and overlooks the City, Capitol, and other Public Buildings; and commands a fine view of the Potomac, with the surrounding country, for many miles in extent. In beauty and healthfulness of position, it is unsurpassed; and its local advantages are such as no other situation in the country can afford.

Its proximity to the National Metropolis gives to young men the opportunity of observing distinguished public characters; of becoming acquainted with the nature and operations of our Government; and of witnessing the highest exhibitions of talent, in the halls of Congress, and in the Supreme Court of the U. States. This is a great advantage, especially to those who are destined to public life; and its practical effects are seen, in the number of its Alumni who are now filling important and useful stations in society.

The College has a good Library, a valuable Philosophical Apparatus, and other means and facilities for pursuing a thorough and liberal course

of studies. It embraces a President, and twelve Professors and Teachers—including those of the National Medical College, which is under the same Corporation. The number of students are annually on the increase.

THE MILITARY ASYLUM.

The worthy establishment known by this name occupies a commanding hill on the northern limits of the city, and is a comfortable home for disabled soldiers and sailors. The buildings are all that could be desired for such an institution, and so are the adjoining lands, the whole of which was purchased and then sold to the Government by the well known banker, George W. Riggs, Esq. The drives leading to this retreat are amongst the most agreeable in the District, and upon one of them, is the former country seat of the late and universally admired Joseph Gales, Esq., the able editor of the National Intelligencer. After Congress had appropriated the money for founding the Military Asylum, the honor of selecting the site was awarded to General Scott, so that the

citizens of Washington are indebted to him for gathering within the limits of the Metropolis the remnants of our military glory.

THE COAST SURVEY OFFICE.

The buildings occupied for the uses of the United States Coast Survey are situated on the West side of New Jersey Avenue, about a sixth of a mile from the Capitol. They consist of four old houses, in a block, presenting a decidedly rusty exterior, and in no way looking like public buildings.

The room of the Superintendent, Prof. A. D. Bache, is at the North end, and that of the Assistant in charge of the Office is at the South end. Great progress has been made in an accurate survey of a large extent of the principal waters in this country, including our coasts, on both the Atlantic and Pacific oceans, and in no branch of the government has there been displayed greater scientific ability. The maps and charts of this office have been of inestimable value to our Navy in the present rebellion. Most of the rooms in the upper stories are appropriated to computers, draughtsmen and engravers. The

fire proof building South of the office, contains the Archives, or Records of Observations, the Library, the Standard Weights, Balances and Measures, the Instruments not in use, and the engraved copper plates.

The Office proper includes all the Departments necessary for working up the materials, both astronomical, topographical, and hydrographic, sent in by the various observers. All these are under the general direction of the Assistant in charge, and under the special direction of their particular heads. The Departments are those for Computing, Drawing, Engraving, Electrotyping, Printing, Publishing, Instrument making, and Archives. When the computations are completed, the materials of the plane table and hydrographic sheets are worked up in the Drawing Department, for the Engravers. The engraved copper-plates are electrotyped, and the printing is done mainly from these, the originals being preserved. The printed sheets are distributed for sale to agents in the principal cities.

The Coast Survey Office, being essentially an office for work, presents but scanty attractions for visitors. Persons wishing to examine any of the methods or processes employed, or desiring in-

formation about matters of the Survey, should apply to the Assistant in charge.

As the construction of Standard Weights and Measures is carried on in the same buildings with the Coast Survey Works, and is under the same Superintendent, it ought to be mentioned that a visit to this department will greatly interest the visitor. Here may not only be seen much in the way of curious scientific operations but also a finished set of Standard Weights, Balances, and Measures, such as are furnished to the States and Custom Houses of the Union. The Assistant and Foreman of the department of Weights and Measures is Mr. J. Saxton, who always takes pleasure in treating strangers with politeness and attention. The gentleman under whose superintendence all the complicated affairs of the Coast Survey are carried on, is Prof. A. D. Bache, whose reputation as a man of science is co-extensive with the civilized world. He is assisted in his arduous duties by some thirty-five assistants and quite a large number of Navy Officers; and it is a remarkable circumstance that the Superintendent has lost *two* brothers, both of whom were officers of the Navy, but employed upon the Coast Survey,—one of them having perished in the waters of Pacific, and the other in those of the Atlantic.

THE NATIONAL CEMETERY.

THE National or Congressional Burial Ground is situated about one mile east of the Capitol, embraces about ten acres, commands an extensive view of the country, is well enclosed with a brick wall, laid out with taste, and beautified with trees and shrubbery. It was located in 1807, and ever since been in the keeping of an incorporated company. The Monuments are manifold and many of them beautiful; and in addition to several private vaults is one spacious and well constructed, enclosed by a neat railing, built by the order and at the expense of Congress, as a place of deposite, for the dead whose remains it may be the purpose of friends subsequently to remove.

Measures have recently been adopted to enlarge this Cemetery, and some twenty additional acres will soon be brought within its limits. The number of interments which have taken place up to the present time is six thousand.

A visit to the "City of the Dead" cannot but prove interesting to the stranger visiting the Metropolis, and among the few and picturesque monuments which will attract his attention, are those to the memory of George Clinton, Elbridge

Gerry, Major General Jacob Brown, Joseph Lovel, Commodore Rogers' son, A. P. Upsher, Commodore Beverly Kennon, Lieut. G. M. Bache, Capt. B. A. Terrett, the wife of Peter von Schmidt, Judge Pendleton Barbour, and Peter Lenox. Quite a large number of Members of Congress have been buried here, and there is a mournful interest in wandering among the monuments which commemorate their names.

“GLENWOOD CEMETERY” is the name of another Cemetery which has recently been laid out by the citizens of Washington. It contains 90 acres at a cost of \$10,000, and lies $1\frac{1}{2}$ miles north of the Capitol, the most direct way to it being by north Capitol street. Thirty acres are now prepared for interments, and a handsome framed lodge or gateway has been built, the front of which, is ornamented with figures of Time, Penitence, and Love. A large and beautiful mausoleum also, capable of containing 100 bodies has been erected at a cost of not less than \$10,000. Its serpentine walks extend about four miles, and the sum of \$35,000 has already been expended in beautifying the spot.

THE CITY HALL.

THIS large and handsome edifice, the official home of the City Fathers, was commenced in 1820 and finished in 1850, it having remained a kind of ruin during most of the intervening time. It occupies a commanding position on Judiciary Square, is 200 feet in length, and after the stucco style of architecture. The Circuit and Criminal Courts hold their sessions in this hall; also the members of the City Councils. The Mayor has his office here, and so also have a large number of the city attorneys.

In this connection it may be well for us to give the Judiciary of Washington, which is as follows:

Supreme Court for the District of Columbia, which is a court of general jurisdiction, civil, criminal, and admiralty. It is composed of four judges.

Levy Court of Washington County meets on on the first Monday of each month. A president presides.

Orphans' Court meets in west wing on second floor. It has one judge.

THE CHURCHES OF WASHINGTON.

THE Metropolis is well supplied with Churches, and considering its extent is quite as well supplied with eloquent preachers as any city in the Union.

Baptist.

First Baptist Church—Thirteenth west, between G and H north.

E Street Baptist—E street north, between Sixth and Seventh west.

Second Baptist Church (Navy-Yard)—Virginia avenue, corner Fourth east.

Fifth Baptist Church—D south, Four-and-a-Half west.

Calvary Baptist—Old Trinity Church, Fifth street, opposite City Hall.

Catholic.

St. Aloysius—North Capitol, between I and K north.

St. Dominick's (Island)—F south, between Sixth and Seventh west.

St. Mary's (German)—372 Fifth west, bet. G & H, north.

St. Matthew's—H north, corner Fifteenth west.

St. Patrick's—F north, corner Tenth west.

St. Peter's—C south, corner Second east.

Episcopal.

Christ Church (Navy-Yard)—G south, between Sixth and Seventh east.

Church of the Ascension—H north, between Ninth and Tenth west.

Church of the Epiphany—G north, between Thirteenth and Fourteenth.

Grace Church (Island)—D south, between Eighth and Ninth west.

St. John's Church—Opposite the Executive Mansion.

Trinity Church—corner Third west and C north.

Trinity Mission—Sixth west, corner H north.

Friends' Meeting Houses.

Hicksite—I north, between Eighteenth and Nineteenth west.

Orthodox Friends' Meeting—412 K, north between ninth and tenth west

Jews' Synagogue.

Washington Hebrew Congregation—Eighth west, between H and I north.

Lutheran.

German Evangelical—Congregation of the Trinity Unaltered Augsburg Confession, Fourth west, corner E north.

German Evangelical—G north, corner Twentieth west.

St. Paul's—H north, corner Eleventh west.

Methodist Episcopal.

East Washington Station—Fourth east, between G south and South Carolina avenue.

Fletcher Chapel—New York avenue, corner Fourth west.

Foundry Church—G north, corner Fourteenth west.

Gorsuch Chapel—L south, corner Four-and-a-Half west.

McKendree Chapel—Massachusetts avenue, between Ninth and Tenth west.

Providence Church—Second east, corner I north.

Ryland Chapel (Island)—Tenth west, corner D south.

Union Chapel—Twentieth west, near Pennsylvania avenue.

Waugh Chapel—A north, corner Fourth east.

Wesley Chapel—Fifth west, corner F north.

Methodist Protestant.

East Washington—Virginia avenue, Fifth east.

M. P. Church—Ninth west, between E and F north.

New Jerusalem.

North Capitol, between B and C.

Presbyterian.

First Presbyterian Church—Four-and-a-Half west, between C and Louisiana avenue.

New York Avenue Presbyterian Church—New York avenue, between Thirteenth and Fourteenth west.

Fourth Presbyterian Church—Ninth west, between G and H north.

Assembly's Church—I street, corner Fifth west.

Sixth Presbyterian Church—Sixth west, corner Maryland avenue, (Island.)

Seventh Presbyterian Church—Seventh west, between D and E south.

Western Presbyterian—H north, between Nineteenth and Twentieth west.

Reformed German.

German Church St. Paul—Four-and-a-Half west, between C and D south, (Island.)

Unitarian.

Unitarian—Sixth west, corner D north.

Colored Churches.

First Baptist—Nineteenth west, corner I north.

Second Colored Church—Missouri avenue, between Sixth and Seventh west.

Asbury M. E.—Eleventh west, corner K north.

Israel M. E.—South Capitol, corner B south.

John Wesley Church—Connecticut avenue, between L and M north.

Little Ebenezer M. E.—D south, between Fourth and Fifth east.

Union Bethel M. E.—M north, between Fifteenth and Sixteenth west.

Union Wesley Chapel—Twenty-Third west, L north.

Zion Wesley Chapel—D south, between Second and Third west, (Island.)

Presbyterian—Fifteenth west, between I and K north.

PRIVATE GALLERIES.

IN the way of private galleries, which, through the liberality of their owners, are occasionally thrown open to the public, those of W. W. Corcoran, Esq., and J. C. McGuire, Esq., are the most interesting and extensive. In the former are represented such men as Cole, Huntington, Gignoux, Leutze, and Fisher of the American school, Robbe, of Dusseldorf, Moreland of the English school, and Mengs and Salvator Rosa of the Italian masters, while the presiding genius of the place is the original Greek Slave of Powers. In the latter gallery are two small pictures, said to be by Rubens, one by Wouverman, by Edmonds, Durand, Huntington, and a goodly number by other talented artists; and of private libraries, we may here mention one of great value, Colonel Peter Force's. The number of volumes which it contains cannot be less than 50,000, comprehending a larger collection bearing upon the history of the United States than can be found elsewhere under one roof in this or any other country. Some of the rooms attached to it are enriched with works of art of almost every description.

ASSOCIATIONS AND SOCIETIES.

Of these there is so great a number in Washington that we can only give their titles without any comments or particulars. Of Masonic fraternity it has two Knights Templars, 5 Chapters, and no less than thirteen Lodges, viz: Federal, Naval, Potomac, Lebanon, New Jerusalem, Hiram, St. John, National, Washington Centennial, B. B. French, Dawson, Harmony and Grand Lodge. The Independent Order of Odd Fellows have a very fine Hall, where seventeen Lodges and Encampments are in the habit of meeting; of the Order of Red Men there are four Tribes and one Council; of the Sons of Temperance several Divisions; and of United Brothers of Temperance four Associations. The Washington Asylum is a large brick building near the Congressional burial ground, with a large garden cultivated by the inmates. It is under the management of a Board of Commissioners, an intendant, matron, and other necessary agents, all of whom are appointed by the Mayor and the Board of Commissioners. Metropolitan Mechanics' Institute meets in the City Hall every Thursday in each month. The Orphan Asylum was erected twenty years ago, on what is called Mausoleum square, owing its existence mainly to the gener-

osity of the late Mrs. Van Ness. A society of ladies was formed in 1815 to give protection and aid to orphans, and Mrs. Madison was appointed first directress. Mrs. Van Ness was her successor, and for several years devoted herself to its interests. The association was incorporated by act of Congress in 1828. On this square, too, stands a mausoleum copied from the Temple of Vesta at Rome, erected by General John P. Van Ness, for his family and that of his wife's father, David Burns. The St. Vincent's Orphan Asylum, at the intersection of G and 10th streets, has been rebuilt on a noble scale, and is liberally sustained by the Roman Catholics. The miscellaneous societies of the city are the Columbian Typographical Society, Washington Library, Vini Lyceum, three Benevolent Societies, the Freeman's Vigilant Total Abstinence Society, and the Young Men's Christian Association.

The Banks of Washington are the Bank of the Metropolis, Patriotic Bank, Bank of Washington, and First National Bank; the Banking Houses, Riggs & Co., Jay Cooke & Co., Rittenhouse, Fant & Co., L. Johnson & Co., J. B. Hutchinson & Co., Barrow, McKelden & Co.; and in Georgetown the Farmers and Mechanics Bank, and the Bank of Commerce.

WASHINGTON HOTELS.

Hotels are quite numerous, but not sufficiently so, even now, to accommodate the public. With one or two unimportant exceptions, they are all situated on Pennsylvania Avenue. The names of the principal ones are the National Hotel, Metropolitan Hotel, (late Brown's,) Willards' Hotel, the United States Hotel, the Kirkwood House, the Washington House, Avenue House, St. Charles, and the Clarendon Hotel. All these hotels are supplied with the best of a first rate market, and with numerous and generally accommodating servants. From the doors of each, the stranger may at almost any moment step into a convenient and elegant car, and go to almost any part of the city he may desire. The prices charged for board are not uniform, but the expenses generally are by no means lower than in such cities as Philadelphia, New York, and Boston. Of private boarding houses there are a great number, and by lovers of quiet these are frequently preferred to the more public establishments. In addition to these, there are many eating-houses, where the visitor pays in proportion to what he consumes.

THE NATIONAL ARMORY.

This edifice is situated on B street south and 7th, near the Smithsonian Institution. The central portion of the building is only completed, which is 103 feet in length, 57 in width, and three stories high. The second and third floors rest upon iron columns. It is designed for the reception and preservation of the arms of the volunteers of the District of Columbia, and also a depository for national trophies, relics, and armorial models, making it worthy of a visit.

OFFICIAL SALARIES.

As Washington is reputed to be a place where people meet to intrigue for office and money, we have deemed it proper to allude to the salaries received by the leading officials. The annual compensation of the President is \$25,000, that of each member of the Cabinet, of whom there are seven, \$3,000, that of the Vice-President \$6,000, that of the Chief Justice of the Supreme Court \$6,500, and the Associate Justices \$6,000

each. All members of Congress receive \$3,000 per annum and mileage, while the Speaker of the House receives \$6,000. All heads of Bureaus receives \$3,000, and the Clerkships range from \$2,500 to \$750. As a general thing, the first of every month is pay day.

OFFICIAL RECEPTIONS.

FEW strangers ever visit Washington during the sessions of Congress without being invited by a friend to a reception, and it is therefore proper that we should briefly allude to them. What we have already said of those held by the President, where the only "entertainment" consists of good music by the Marine Band, is only partly true, when applied to the receptions held by the various members of the Cabinet. On one evening in each week do the Secretaries throw open their houses to the public, and though all strangers, when properly introduced, are cheerfully welcomed, it is not customary for residents to attend who do not receive cards of invitation, but these are always sent to all persons who have previously taken the trouble to leave their own complimentary cards. Some of the Judges of the Supreme

Court, and many of the more hospitable members of Congress, also, hold receptions at stated times, but as these usually partake of the character of private parties, they are attended only by special invitation. A species of entertainment called the Hop has lately been brought into vogue by the leading hotels, and better occasions than they afford for the thinker to study character, or for the young and joyous to have a good time generally, are seldom met with anywhere.

In this connection it may be well to add a few remarks on the etiquette of Washington generally. On the assembling together of Congress a systematic exchange of calls takes place between the members of the Cabinet, members of Congress and the President. For strangers to call upon the President or the Secretaries upon business before or after the regular business hours is considered improper, although this breach of etiquette is constantly committed to a great extent. As is usual in other American cities, it is customary here for those who have attended any private entertainment by invitation, to call upon the giver of the party on the second or third day thereafter. With regard to the minor customs of polite society in the Metropolis, it is only necessary to state that all such matters here, as is the case in other

enlightened communities, are directed by the simple precepts of good breeding.

THE MARKETS OF WASHINGTON.

FROM hotels the transition to the markets of the town is natural. Of market houses there are four, but the largest and most important is Centre market on Pennsylvania Avenue. In describing this, we describe them all. A greater variety of good things can no where be found collected under one roof, than may at all times be found in Centre market. The highlands of Maryland and Virginia supply it with beef and mutton, that cannot be excelled, while the adjoining country pours into it a variety of vegetables that makes one wonder where they all come from. In the way of fish, the Potomac yields a great variety, the shad, rock fish or basse and the oysters, having no superior in the country:—and no market is better supplied with venison, wild turkey, ortolon, reed-birds and the famous canvas back ducks. And then again, although the Centre market building is by no means a classical one, yet no market in this land has been frequented by so many illustrious men,—such men for example as

Marshall and Jackson, Webster, Clay, and John Quincy Adams; and those who take pleasure in studying the peculiarities of an interesting negro population cannot fail to be amused by a morning walk in and about the Centre market when business is in full blast.

THE CLIMATE OF WASHINGTON.

AN erroneous opinion has for many years prevailed respecting the healthfulness of this city,—the grave yard records having conclusively proven the fact that there are very few more healthy localities in the Union. The climate resembles that of the adjoining States of Maryland and Virginia, and may be denominated as temperate. Many winters come and go without bringing a bit of snow, although the winter of 1855-6 will ever be remembered for its many severe snow storms and its excessive coldness. The summers are long and oftentimes oppressive, but the air is kept pure by frequent thunder storms. During the autumn, on the immediate banks of the Potomac, bilious and intermitting fevers prevail to a considerable extent, but the malarian influences do not last long, and those who have been acclimated are

seldom subject to these diseases. The magnificent distances of the city have often been ridiculed, but the broad streets and avenues are undoubtedly of great service in admitting to every dwelling a free circulation of wholesome air, which, with good water, may be considered invaluable blessings.

SPECIFIC DUTIES OF EXECUTIVE OFFICERS.

WITH a view of facilitating the views of persons visiting Washington on business, we think it proper to mention the executive officers and to specify their several duties.

DEPARTMENT OF STATE.

The whole machinery employed to conduct the business arising out of our foreign relations with all the powers of the world is far more simple than is generally conceived. The number employed in the Department of State of the United States is only seventeen, as follows: One Secretary of State, one Assistant Secretary of State, one chief clerk, twelve clerks, one translator, and one librarian.

Diplomatic Branch.—This Branch of the State Department has charge of all correspondence between the department and all diplomatic

agents of the United States abroad, and those of foreign powers accredited to this government. In it all diplomatic instructions sent from the department, and communications to commissioners under treaties of boundaries, &c., are prepared, copied, and recorded; and all of like character received are registered and filed, their contents being first entered in an analytic table or index.

Consular Branch.—This branch has charge of the correspondence, &c., between the department and the consuls and commercial agents of the United States. In it instructions to those officers, and answers to their despatches and to letters from other persons asking for consular agency, or relating to consular affairs, are prepared and recorded.

The Disbursing Agent.—He has charge of all correspondence and other matters connected with accounts relating to any fund with the disbursement of which the department is charged.

The Translator.—His duties are to furnish such translations as the department may require. He also records the commissions of consuls and vice consuls, when not in English, upon which exequaturs are issued.

Clerk of Appointments and Commissions.—He makes out and records commissions, letters of appointment, and nominations to the Senate; makes out and records exequaturs, and records, when in English, the commissions on which they are issued. Has charge of the library.

Clerk of the Rolls and Archives.—He takes charge of the rolls, or enrolled acts and resolutions of Congress, as they are received at the department from the President; prepares the authenticated copies thereof which are called for; prepares for, and superintends their publication, and that of treaties, in newspapers and in book form; attends to their distribution throughout the United States, and that of all documents and publications in regard to which this duty is assigned to the department; writing and answering all letters connected therewith. Has charge of all Indian treaties, and business relating thereto.

Clerk of Authentications and Copyrights. (The duties of this office have been transferred to the Interior Department.) He has charge of the seals of the United States and of the department, and prepares and attaches certificates to papers presented for authentication; receives and accounts for the fees. Has charge of publications transmitted to the department under the laws relating to copyrights; records and indexes their titles; records all letters from

the department, other than the diplomatic and consular.

Clerk of Pardons and Passports.—He prepares and records pardons and remissions; and registers and files the petitions and papers on which they are founded. Makes out and records passports; keeps a daily register of all letters, other than diplomatic and consular, received, and of the disposition made of them; prepares letters relating to this business.

ATTORNEY GENERAL'S OFFICE.

The ordinary business of this office may be classified under the following heads:

1. Official opinions on the current business of the government, as called for by the President, by any head of department, or by the Solicitor of the Treasury.

2. Examination of the titles, of all land purchased, as the sites of arsenals, custom-houses, light-houses, and all other public works of the United States.

3. Applications for pardons in all cases of conviction in the courts of the United States.

4. Applications for appointment in all the judicial and legal business of the Government.

5. The conduct and argument of all suits in the Supreme Court of the United States in which the government is concerned.

6. The supervision of all other suits arising in any of the departments when referred by the head thereof to the Attorney General.

To these ordinary heads of the business of the office are added at the present time the following, viz :

First. The direction of all appeals on land claims in California.

Second. The codification and revision of the laws of the District of Columbia.

INTERIOR DEPARTMENT.

Has one Secretary, and its clerical force consists of one chief clerk, one disbursing agent, and ten other regular clerks; and to its supervision and management are committed the following branches of the public service :

1st. *The Public Lands.*—The chief of this bureau is called the “Commissioner of the General Land Office.” The Land Bureau is charged with the survey, management, and sale of the public domain, and the issuing of titles therefor, whether derived from confirmations of grants made by former governments, by sales, donations,

of grants for schools, military bounties, of public improvements, and likewise the revision of Virginia military bounty land claims, and the issuing of scrip in lieu thereof. The Land Office, also, audits its own accounts. Its principal officers are a recorder, chief or principal clerk of public lands, principal clerk of private land claims, and principal clerk of surveys—all of whom are appointed by the President and confirmed by the Senate—besides a draughtsman, assistant draughtsman, and some 106 clerks of various grades.

2d. *Pensions*.—The Commissioner is charged with the examination and adjudication of all claims arising under the various and numerous laws passed by Congress granting bounty land or pensions for military or naval services in the revolutionary and subsequent wars in which the United States have been engaged. He has one chief clerk, and a permanent corps consisting of some seventy other clerks, to which Congress, to enable him to meet the extraordinary requirements of the new bounty-land law, has added a temporary force of about fifty clerkships of different denominations.

3d. *Indians*.—The Commissioner of Indian Affairs is provided with a chief clerk and about fifteen other subordinate clerks.

4th. *Patent Office*.—To this bureau is committed the execution and performance of all “acts and things touching and respecting the granting and issuing of patents for new and useful discoveries, inventions, and improvements;” the collection of statistics relating to agriculture; the collection and distribution of seeds, plants, and cuttings. It has a chief clerk—who is by law the Acting Commissioner of Patents in the absence of the Commissioner—ten principal and ten assistant examiners of Patents, besides some dozen other subordinate permanent clerks.

Besides these four principal branches of this new executive department, the organic act of 1849 transferred to it from the Treasury department the supervision of the accounts of the United States marshals and attorneys, and the clerks of the United States court; the management of the lead and other mines of the United States, and the affairs of the penitentiary of the United States in the District of Columbia; and from the State Department the duty of taking and returning the censuses of the United States, and of supervising and directing the acts of the Commissioner of Public Buildings. By recent acts of Congress, also, the hospital for the insane of the army and navy and of the District of Columbia is under

the management of this department; and by assignment from the President, it has added to its long list of duties the survey and demarcation of the unsettled boundary lines between the States and Territories and bordering nations.

This department is at present very inconveniently separated and located, and should be appropriately and permanently provided for. The Secretary's office occupies a portion of the new Patent Office building, the General Land Office a portion of the Treasury building, and the Pension Office a portion of "Winder's building," now the property of the government, whilst the Indian Office is located in premises not fire-proof, and rented of their private owners.

TREASURY DEPARTMENT.

The Treasury Department consists of the Secretary of the Treasury, two comptrollers, commissioner of the customs, six auditors, treasurer, register, solicitor, light-house board, and coast survey.

The following is a brief indication of the duties of these several offices and of the force employed therein respectively:

Secretary's Office.—Secretary of the Treasury; Assistant Secretary; one engineer in charge; one

architect, and three draughtsmen temporarily employed, and twenty-three clerks. The Secretary of the Treasury is charged with the general supervision of the fiscal transactions of the government, and of the execution of the laws concerning the commerce and navigation of the United States. He superintends the survey of the coast, the light-house establishment, the marine hospitals of the United States, and the construction of certain public buildings for custom-houses and other purposes.

First Comptroller's Office.—Comptroller, and fifteen clerks. He prescribes the mode of keeping and rendering accounts for the civil and diplomatic service as well as the public lands, and revises and certifies the balances arising thereon.

Second Comptroller's Office.—Comptroller, and seventeen clerks. He prescribes the mode of keeping and rendering the accounts of the army, navy, and Indian departments of the public service, and revises and certifies the balances arising thereon.

Office of Commissioner of the Customs.—Commissioner, and eleven clerks. He prescribes the mode of keeping and rendering the accounts of the customs revenue and disbursements, and for the building and repairing custom-houses, &c.,

and revises and certifies the balances arising thereon.

First Auditor's Office.—First Auditor, and nineteen clerks. He receives and adjusts the accounts of the customs revenue and disbursements, appropriations and expenditures on account of the civil list and under private acts of Congress, and reports the balances to the Commissioner of the Customs and the First Comptroller, respectively, for their decision thereon.

Second Auditor's Office.—Second Auditor, and twenty-one clerks. He receives and adjusts all accounts relating to the pay, clothing, and recruiting of the army, as well as armories, arsenals, and ordnance, and all accounts relating to the Indian department, and reports the balances to the Second Comptroller for his decision thereon.

Third Auditor's Office.—Third Auditor, and seventy-eight clerks. He receives and adjusts all accounts for subsistence of the army, fortifications, Military Academy, military roads, and the Quartermaster's department, as well as for pensions, claims arising from military services previous to 1816, and for horses and other property lost in the military service, under various acts of Congress, and reports the balances to the Second Comptroller for his decision thereon.

Fourth Auditor's Office.—Fourth Auditor, and sixteen clerks. He receives and adjusts all accounts for the service of the Navy Department, and reports the balances to the Second Comptroller for his decision thereon.

Fifth Auditor's Office.—Fifth Auditor, and six clerks. He receives and adjusts all accounts for diplomatic and similar services performed under the direction of the State Department, and reports the balances to the First Comptroller for his decision thereon.

Sixth Auditor's Office.—Sixth Auditor, and one hundred and one clerks. He receives and adjusts all accounts arising from the service of the Post Office Department. His decisions are final, unless an appeal be taken in twelve months to the First Comptroller; and he superintends the collection of all debts due the Post Office Department.

Treasurer's Office.—Treasurer, and thirteen clerks. He receives and keeps the moneys of the United States in his own office, and that of the depositories created by the act of the 6th of August, 1846, and pays out the same upon warrants drawn by the Secretary of the Treasury, countersigned by the First Comptroller, and upon warrants drawn by the Postmaster General, and

countersigned by the Sixth Auditor, and recorded by the Register. He also holds public moneys advanced by warrant to disbursing officers, and pays out the same upon their checks.

Register's Office.—Register, and twenty-nine clerks. He keeps the accounts of public receipts and expenditures; receives the returns and makes out the official statement of commerce and navigation of the United States; and receives from the First Comptroller and Commissioner of Customs all accounts and vouchers decided by them, and is charged by law with their safe-keeping.

Solicitor's Office.—Solicitor, and six clerks. He superintends all civil suits commenced by the United States, and instructs the United States attorneys, marshals, and clerks in all matters relating to them and their results. He receives returns from each term of the United States courts, showing the progress and condition of such suits; has charge of all lands and other property assigned to the United States in payment of debts, and has power to sell and dispose of the same for the benefit of the United States.

Light-House Board.—This board directs the building and repairing of light-houses, light-vessels, buoys and beacons, contracts for supplies of oil, &c.

The duties of the Coast Survey have already been described.

NAVY DEPARTMENT.

The Navy department consists of the Navy Department proper, being the office of the Secretary and of five bureaus attached thereto, viz: Bureau of Navy-yards and Docks, Bureau of Construction, Equipment, and Repair, Bureau of Provisions and Clothing, Bureau of Ordnance and Hydrography, and the Bureau of Medicine and Surgery.

The following is a statement of the duties of each of these offices and of the force employed therein:

Secretary's Office.—Secretary of the Navy: chief clerk; and eleven clerks. The Secretary of the Navy has charge of everything connected with the naval establishment, and the execution of all laws relating thereto is intrusted to him, under the general direction of the President of the United States, who, by the constitution, is commander-in-chief of the army and navy. All instructions to commanders of squadrons and commanders of vessels, all orders of officers, commissions of officers both in the navy and marine corps, appointments of commissioned and warrant

officers, orders for the enlistment and discharge of seamen, emanate from the Secretary's office. All the duties of the different bureaus are performed under the authority of the Secretary, and their orders are considered as emanating from him. The general superintendence of the marine corps forms, also, a part of the duties of the Secretary, and all the orders of the commandant of that corps should be approved by him.

Bureau of Navy Yards and Docks.—Commodore, chief of the bureau, four clerks, one civil engineer, and one draughtsman. All the navy-yards, docks and wharves, buildings and machinery in navy-yards, and everything immediately connected with them, are under the superintendence of this bureau. It is also charged with the management of the Naval Asylum.

Bureau of Construction, Equipment, and Repair.—Chief of the bureau, eight clerks, and one draughtsman. The office of the engineer-in-chief of the navy, is attached to this bureau, who is assisted by three assistant engineers. This bureau has charge of the building and repairs of all vessels-of-war, purchase of materials, and the providing of all vessels with their equipments, as sails, anchors, water-tanks, &c. The engineer-in-chief superintends the construction of all ma-

rine steam engines for the navy, and, with the approval of the Secretary, decides upon plans for their construction.

Bureau of Provisions and Clothing.—A purser United States navy, chief of bureau, and four clerks. All provisions for the use of the navy, and clothing, together with the making of contracts for furnishing the same, come under the charge of this bureau.

Bureau of Ordnance and Hydrography.—Commodore, chief of bureau, four clerks, and one draughtsman. This bureau has charge of all ordnance and ordnance stores, the manufacture or purchase of cannon, guns, powder, shot, shells, &c., and the equipment of vessels-of-war, with everything connected therewith. It also provides them with maps, charts, chronometers, barometers, &c., together with such books as are furnished ships-of-war. “The United States Naval Observatory and Hydrographical Office” at Washington, and the Naval Academy at Annapolis, are also under the general superintendence of the chief of this bureau.

Bureau of Medicine and Surgery.—Surgeon United States navy, chief of bureau, one passed assistant surgeon United States navy, and two clerks. Everything relating to medicines and

medical stores, treatment of sick and wounded, and management of hospitals, comes within the superintendence of this bureau.

POST OFFICE DEPARTMENT.

The direction and management of the Post Office Department are assigned by the constitution and laws to the Postmaster General. That its business may be the more conveniently arranged and prepared for his final action, it is distributed among several bureaus, as follows: The Appointment Office, in charge of the First Assistant Postmaster General; the Contract Office, in charge of the Second Assistant Postmaster General; the Finance Office, in charge of the Third Assistant Postmaster General; and the Inspection Office, in charge of the chief clerk.

Appointment Office.—First Assistant Postmaster General, and nineteen clerks. To this office are assigned all questions which relate to the establishment and discontinuance of post offices, changes of sites and names, appointment and removal of postmasters and route and local agents, as, also, the giving of instructions to postmasters. Postmasters are furnished with marking and rating stamps and letter balances by this bureau, which is charged also with providing blanks and station-

ery for the use of the department, and with the superintendence of the several agencies established for supplying postmasters with blanks. To this bureau is likewise assigned the supervision of the ocean mail steamship lines, and of the foreign and international postal arrangements.

Contract Office.—Second Assistant Postmaster General, and twenty-six clerks. To this office is assigned the business of arranging the mail service of the United States, and placing the same under contract, embracing all correspondence and proceedings respecting the frequency of trips, mode of conveyance, and times of departures and arrivals on all the routes; the course of the mail between the different sections of the country, the points of mail distribution, and the regulations for the government of the domestic mail service of the United States. It prepares the advertisements for mail proposals, receives the bids, and takes charge of the annual and occasional mail lettings, and the adjustment and execution of the contracts. All applications for the establishment or alteration of mail arrangements, and the appointment of mail messengers, should be sent to this office. All claims should be submitted to it for transportation service not under contract, as the recognition of said service is first to be ob-

tained through the Contract Office as a necessary authority for the proper credits at the Auditor's Office. From this office all postmasters at the ends of routes receive the statement of mail arrangements prescribed for the respective routes. It reports weekly to the Auditor all contracts executed, and all orders affecting accounts for mail transportation; prepares the statistical exhibits of the mail service, and the reports of the mail lettings, giving a statement of each bid; also of the contracts made, the new service originated, the curtailments ordered, and the additional allowances granted within the year.

Finance Office.—Third Assistant Postmaster General, and twenty-one clerks. To this office are assigned the supervision and management of the financial business of the department, not devolved by law upon the Auditor, embracing accounts with the draft offices and other depositories of the department, the issuing of warrants and drafts in payment of balances reported by the Auditor to be due to mail contractors and other persons, the supervision of the accounts of offices under orders to deposite their quarterly balances at designated points, and the superintendence of the rendition by postmasters of their quarterly returns of postages. It has charge of the dead-

letter office, of the issuing of postage stamps and stamped envelopes for the pre-payment of postage, and of the accounts connected therewith.

To the Third Assistant Postmaster General all postmasters should direct their quarterly returns of postage; those at draft offices, their letters reporting quarterly the net proceeds of their offices, and those at depositing offices, their certificates of deposit; to him should also be directed the weekly and monthly returns of the depositaries of the department, as well as all applications and receipts for postage stamps and stamped envelopes, and for dead letters.

Inspection Office.—Chief clerk, and seventeen clerks. To this office is assigned the duty of receiving and examining the registers of the arrivals and departures of the mails, certificates of the service of route agents, and reports of mail failures; of noting the delinquencies of contractors, and preparing cases thereon for the action of the Postmaster General; furnishing blanks for mail registers, and reports of mail failures; providing and sending out mail-bags and mail-locks and keys, and doing all other things which may be necessary to secure a faithful and exact performance of all mail contracts.

All cases of mail depredation, of violation of

law by private expresses, or by the forging or illegal use of postage stamps, are under the supervision of this office, and should be reported to it.

All communications respecting lost money, letters, mail depredations, or other violations of law, or mail-locks and keys, should be directed "Chief Clerk, Post Office Department."

All registers of the arrivals and departures of the mails, certificates of the service of route agents, reports of mail failures, applications for blank registers, and reports of failures, and all complaints against contractors for irregular or imperfect service, should be directed "Inspection Office, Post Office Department."

WAR DEPARTMENT.

In the Secretary's office proper there are one chief clerk, seven subordinate clerks, two messengers, and four watchmen. The following bureaus are attached to this department :

Commanding General's Office, Adjutant General's Office. In this office are kept all the records which refer to the personnel of the army, pay rolls, &c. It is here where all military commissions are made out. The Judge Advocate General is also connected with it. The Quartermaster General's Office; the Paymaster General's Office; the Commissary General's Office; the Surgeon General's Office; the Engineer Office; the Topographical Bureau; and the Ordnance Bureau.

THE PUBLIC SCHOOLS.

The schools of Washington are quite numerous. Of free public schools there are four, with quite a large retinue of primary schools, which are carried on at the annual expense of about \$15,000.

Select schools and seminaries for the education of both sexes also exist in different parts of the city, several of them of a high and established character. Public attention has been strongly directed to these institutions, and perhaps in no other city are there to be found superior advantages of education, which are annually on the increase. There are also several excellent boarding schools in Washington and Georgetown.

THE NATIONAL INSTITUTE.

THE Institution was founded in 1810, and has for its object the promotion of science in all departments. It holds its meetings and has its headquarters at the Patent Office, and the President is Peter Force, Esq. It has a miscellaneous library of nearly 4000 volumes, pamphlets, maps, and charts, with a few interesting manuscripts, and in the cabinet are many medals and coins.

M E D I C A L D E P A R T M E N T O F G E O R G E T O W N
C O L L E G E .

This Institution was organized by the President and Faculty of Georgetown College in May, 1851, under the authority of the law of Congress passed in March, 1815, conferring upon Georgetown College the rights and privileges of a university. The college buildings are owned by the faculty, and are situated at the intersection of F and 12th streets, and have a central and commanding location. They contain lecture-rooms of large size and approved construction; a well-furnished museum; a convenient and well-lighted dissecting-room; together with all the other apartments found in well arranged college buildings.

C O L U M B I A I N S T I T U T I O N F O R T H E I N S T R U C -
T I O N O F T H E D E A F A N D D U M B A N D T H E
B L I N D .

It is located on Kendall Green, near the junction of M and Boundary streets, and was incorporated in 1857. The facade of the front building is built of pressed brick and dressed brown free-stone, sixty-six feet in length, twenty-eight in width, and four stories high.

T H E E Q U E S T R I A N S T A T U E O F W A S H I N G T O N .

It is placed in the circle on Pennsylvania avenue and 23d street. The statue is of bronze, elevated upon a stone pedestal, (another pedestal has been designed, with four concave faces, which are to contain some historical devices,) facing the east, and presenting a side view on 23d street. It is colossal in size, being eleven feet if standing erect, and fifteen on horseback.

This is a work of art executed by Mr. Mills, at a cost to the Government of \$50,000, expressing with great truthfulness the high qualities of the patriot whom it commemorates at the crisis of the battle at Princeton.

B O T A N I C A L G A R D E N .

In front of the western entrance of the Capitol grounds is the Botanical garden. It is a botanical treasury, in which the most rare plants are to be found. The Green House is very beautiful, and transplants one apparently to the midst of the tropics. The collection is gathered almost from all quarters of the globe. These are all carefully arranged, and opened to the public for general inspection.

EQUUS^M STATUE of GEN^L JACKSON.

LUNATIC ASYLUM.

HOSPITAL FOR THE INSANE.

Is situated very high on left bank of the Potomac river, near the junction of the Eastern Branch. The site is a beautiful one, having a commanding view of the city and surrounding country.

The design and specifications were made by Mr. T. U. Walter, and is in the collegiate style of Gothic architecture, very handsomely built of brick, presenting an imposing facade of seven hundred and eleven feet, divided into sections, each section receding from the center, and from each other, by which means it gives corridors in each section for the admission of light. The interior is conveniently arranged into wards adapted to the particular state of the patients.

The central part of the building has buttresses on each corner, and the main tower contains a magnificent oriel window. The windows surrounding the building are ornamented with cast-iron hood mouldings. Attached to this institution is an extensive farm, highly cultivated; and around the building are beautiful lawns, groves, and walks, presenting quite an ornamental appearance. The whole of the grounds are enclosed by a substantial brick wall.

G E O R G E T O W N .

No stranger at the Seat of Government should ever think of omitting a visit to Georgetown, which is on the Potomac above Washington, and only separated from it by a charming stream called Rock Creek. It was formerly a place of considerable commercial importance, and is even now a thriving and busy place. It is connected with the Coal region of Cumberland by the Ohio and Chesapeake Canal, and with New York, Boston, and the West Indies by lines of sailing packets. The brands of flour exported from this city uniformly command the highest prices in the northern markets, and much the largest amount of sugar consumed by the people of the District of Columbia is imported directly to this city in vessels belonging to its leading merchants.

The lofty eminences that overlook the town from the North and West are known as the Heights of Georgetown. Along these elevations gentlemen of wealth have built their dwellings, and cultivated beautiful and extensive gardens. Here, when he was Secretary of War resided Mr. Calhoun, here also resided Mr. Bodisco the Russian Minister, and the Diplomatic Represen-

tatives of the French and English Governments resided here.

The prospects from these Heights, of the great Valley of the Potomac and of the entire City of Washington, have been considered by travellers as unsurpassed in point of grandeur and beauty by any thing of the kind in the United States. Among the attractions of Georgetown are the College, the Convent, the Female Seminary, the Aqueduct, the Cemetery and the Little Falls.

GEORGETOWN COLLEGE, D. C.

GEORGETOWN College is situated on the northern bank of the Potomac at the west end of Georgetown, and commands a full view of Georgetown, Washington, the Potomac, and a great part of the District of Columbia. Its situation is peculiarly healthy.

In the year 1785, five gentlemen, the principal of whom was the Rev. John Carroll, afterwards the first Catholic Archbishop of Baltimore, formed a design of building "An Academy at Georgetown, Potowmack River, Maryland." In 1789, the first house was built; in 1792 the schools commenced, and in 1798 we find it "The

College of Georgetown, Potomac River, State of Maryland." In May, 1815, Congress raised it to the rank of an University. In May, 1851, "The Medical Department of Georgetown College" was opened in Washington, D. C.

The College buildings are spacious, and contain a fine Library of 25,000 volumes, an extensive Philosophical Apparatus, and a neat Museum of Natural History. An Astronomical Observatory, sixty feet long by thirty wide and furnished with Instruments of the first class, stands three hundred yards West of the College.

The Academic year begins on the 15th of September, and ends on the last of July. The collegiate Course of Studies occupies generally seven years, inclusive of the preparatory classes, which last four years, unless the proficiency of the Student authorize an abbreviation of that term. The English Department, for those who cannot devote the time to the collegiate Course, embraces all the branches of a thorough English education, Mathematics, and Natural Philosophy, together with French, included.

The Public are admitted at all hours of the day to see the Establishment, and the President or some of the Professors, themselves, generally wait on visitors.

ACADEMY OF THE VISITATION.

THIS Academy, founded in 1799, is in a healthy and airy situation, on the Heights of Georgetown in the District of Columbia, contiguous to the eastern margin of the Potomac. The windows command a view of this magnificent river, and at a distance of the City of Washington. The ladies who are entrusted with the direction and care of the studies, are members of the Religious Order, founded in 1610, by St. Francis de Sales, and directed at the commencement by St. Jane Frances Fremiot de Chantal. Meekness, benevolence, and a moderate indulgence constituted the character of those venerated benefactors of society, in their direction of youth. It is the study of their daughters to display these virtues, in the fulfilment of the high obligations imposed upon them by the confidence of their friends.

The course of instruction comprises Orthography, Reading, Writing, Arithmetic, Grammar, Ancient and Modern Geography, the use of the Globes, Prose and Poetical Composition, Sacred and Profane History, Mythology, Rhetoric, Astronomy, Moral and Natural Philosophy, Chem-

istry, Mineralogy, Botany, Geometry, Algebra, Book-keeping, French, Spanish, Italian, German, and Latin Languages; Music on the Piano, Harp, Guitar, and Organ; Vocal Music, Drawing, Painting in Water Colors, in Oil, and on Velvet, Plain and Ornamental Needle Work, Tapestry, Lace Work, Bead Work, &c.

A public distribution of premiums takes place on the last Wednesday of July.

The annual vacation commences on the last Thursday of July—the exercises re-commence on the first Monday in September.

Strangers are permitted to visit the Academy every day excepting Sunday; the most convenient hours are from 11 until 2 o'clock.

THE AQUEDUCT,

Which spans the Potomac at Georgetown, is a stupendous work, and has attracted the attention of European as well as American architects and men of science. It was constructed by Major Turnbull, of the Topographical Engineers, and cost nearly \$2,000,000. It has nine piers, whose foundations, which are of granite, are no less

than *thirty-six feet under water*; it is fourteen hundred and forty-six feet long, and rises above the water about forty feet. It connects the Ohio and Chesapeake Canal with Alexandria. The scenery of the river, at this point, is varied and interesting.

OAK HILL CEMETERY, GEORGETOWN,

Is located on the heights of the town; entrance to the grounds, Road street, at the northern extremity of Washington street. It was laid out by G. F. de la Roche, Esq., on the forest land long known as Parrott's Woods, (a favorite place of resort in summer by the inhabitants of the place,) at great expense, and under the direction of the wealthy and very noble-hearted banker, W. W. Corcoran, Esq., who obtained a charter from Congress for it in the year 1849 (under the name of Oak Hill Cemetery) as a tribute of his affection for the place of his birth. The situation, being directly on Rock Creek, is romantic to a great degree, and the best taste has been displayed in its arrangement, making quite an ornament to the town, and which is constantly visited by a number of persons.

THE LITTLE FALLS.

THESE are about three miles above Georgetown, and at the head of tide water. The great Potomac is here so greatly contracted that a stone can be easily tossed from one shore to the other; the fall of water is about fifteen feet; the surrounding scenery is wild and exceedingly picturesque; and the spot is particularly famous as a resort for the followers of the gentle art. The principal game fish caught here are the rock fish or striped bass, and the spot is sometimes visited by the anglers of places as remote as Baltimore and Charleston. The fame of the little falls has been somewhat increased of late years, by the fact that it was a favorite angling haunt of the Hon. Daniel Webster, Sir John F. Crampton, the late British Minister, and the late Hon. George M. Bibb.

THE GREAT FALLS.

The Great Falls of the Potomac, which are well worth visiting, are about ten miles further up the river, and may be reached by carriage or

canal boat. When the Potomac is full, the aspect of these falls is exceedingly grand, and the deep cut or gorge through the solid rocks which abound in their vicinity are exceedingly picturesque and interesting, being seventy-six feet high. The diversity and beauty of the scenery between the Great Falls and Georgetown is worthy of all praise. A more interesting region for the exploration of the geologist or painter can hardly anywhere be found.

T H E P O T O M A C W A T E R - W O R K S .

From these great water-works the cities of Washington and Georgetown are supplied with water, at a cost to the General Government of nearly four millions of dollars.

On Lee's Hill on the heights of Georgetown, is built the High Service reservoir for the purpose of supplying water to the city of Georgetown. From the elevation upon the reservoir, the spectator commands a fine view of Georgetown, the Potomac river, and the forest-clad hills of Virginia.

The Aqueduct is a conduit of masonry, circular in form, and nine feet in internal diameter.

It is built of stone or bricks set in hydraulic

cement or water lime, which in time becomes as hard as the brick itself.

The whole length of the work from the Great Falls of the Potomac, to the Distributing Reservoir above Georgetown, is $12\frac{1}{2}$ miles.

The capacity of the work is to supply 67,596,400 gallons of water every 24 hours.

New York has a supply of about 30,000,000 gallons

The greater part of the work is under ground, many hills have been tunneled; many ravines crossed by embankments with culverts for the passage of the streams beneath the Aqueduct; but it is only at a few bridges that the Aqueduct itself can be seen, as all else is carefully covered with earth to protect it from frost or from decay, and the Aqueduct looks like an abandoned railway route from which the rails have been removed.

The first structure to be seen in connection with the Aqueduct, is the bridge by which the water pipes are carried over Rock creek, which separates the cities of Washington and Georgetown.

This is an arch of 200 feet clear span, composed of two immense cast iron pipes, four feet

in internal diameter, which in the form of an arch springing from massive abutments of sandstone, support a horizontal roadway, and at the same time convey the water of the Aqueduct across the stream.

Passing through Georgetown, and following the road along the bank of the canal, we find just above the City another bridge, in which, by a similar cast iron arch of 120 feet span, the pipes cross the basin known as College branch, from the college upon the hill above it.

About one mile above Georgetown upon the brow of the table land over-looking the Valley of the Potomac, and at an elevation of 145 feet above tide, we find the Distributing Reservoir, an oblong sheet of water containing about 10 acres.

It is nearly a mile long, and a quarter of a mile in width.

Here the Aqueduct proper of masonry ends; below this point, the water being conveyed in cast-iron pipes to send through the Cities.

The embankment of the Aqueduct forms a level road, and a pleasant drive through the beautiful scenery of the Potomac Valley.

Two miles from the Distributing Reservoir wo

reach the Receiving Reservoir, in which the water, retained by an immense embankment 65 feet in height and several hundred feet in length, spreads out among the hills in an irregular shape resembling a mountain lake.

Its extreme length is about seven-eighths of a mile. Its surface contains 52 acres, and its extreme depth is 40 feet.

Here are stored up above the level to which the water could be drawn down in case of accident, or while clearing out the Aqueduct from the falls, 100,000,000 gallons of water.

The two Reservoirs would supply, in case of any such emergency, or the interruption of the Aqueduct by a hostile force, 200,000,000 gallons of water.

The gate houses, which regulate the flow and supply of water here and at the other Reservoir, are built in a massive and durable style, as though intended to last for ages.

The height of the water in this Reservoir is regulated by a waste channel, excavated through the solid rock to a great depth. The materials taken from this excavation were used in the construction of the embankment which retains the water and forms the lake or Reservoir.

The Aqueduct enters this Reservoir by a tunnel 800 feet in length through solid rock.

Passing over the Reservoir, we find again the level road on top of the Aqueduct, which winds through a bold country for two miles further to the Cabin John Bridge.

This is a stupendous arch of granite, spanning a ravine by a single leap of 220 feet. The depth of the ravine below the top of the bridge is 101 feet.

This is the largest masonry arch in the world. The famous Grosvenor Bridge of Chester, in Great Britain, being of 20 feet less span.

The width of the bridge is only 20 feet; its thickness at top 14 feet 6 inches; its extreme length 482 feet.

The conduit, or water channel through it, is 9 feet in diameter, lined with bricks and asphaltum,

The whole of the masonry is laid in hydraulic cement.

The country grows wilder as we proceed, and about $1\frac{1}{8}$ miles above Cabin John Bridge the Aqueduct crosses the Mountain Spring Brook by a graceful elliptical arch of masonry of 75 feet span.

At the end of this bridge it plunges into the

mountain, and in the space of half a mile passes through two tunnels.

The two bridges above this point are small; but there are many tunnels, and the scenery is very wild and beautiful.

At the Great Falls, 16 miles from the President's House, a dam of stone crosses the river, and a massive construction in cut stone guards the head of the Aqueduct, which here admits the water to its channel, passing under the Chesapeake and Ohio Canal.

A gate-house contains the gates and valves by which the water is regulated in its flow towards the city.

The first turf of this work was dug by President Pierce, on the 8th November, 1853, in presence of members of the Cabinet, of Congress, and the municipal authorities of the District cities.

Appropriations were not given with regularity, and the work did not therefore proceed with the speed desired by the engineers. But, on the 3d of January, 1859, the day before the Senate occupied its new Chamber for the first time, the water brought from the Receiving Reservoir burst from the fountain at the foot of the Capitol, and rose with a jet of 99 feet in height.

A R L I N G T O N H O U S E .

By this name was the mansion of *George Washington Park Custis* designated. It occupies a commanding position on the Virginia side of the Potomac, nearly opposite Georgetown. The edifice is extensive, elegant, and imposing, two hundred feet above the water, and commands a very fine view of the Capitol. At this place were carefully preserved many rare and valuable pictures and other relics, descended from the ancestors of Mr. Custis, and some of them once in the possession of General Washington. When General La Fayette made his last visit to this country he was a frequent guest at Arlington House. And in this connection it may not be deemed out of place to mention the fact that for many years Mr. Custis, during his life-time, was in the habit of printing in the *National Intelligencer*, on the anniversary of General Washington's birth day, a chapter of personal reminiscences respecting the illustrious Chief. During the rebellion this property has been confiscated by the Government and sold at public auction.

ALEXANDRIA.

ALTHOUGH no longer within the District of Columbia, yet this City is deserving of a passing notice on account of its venerable age and its attractions as a commercial town. It is on the southern bank of the Potomac, about six miles below Washington, and is accessible both by steamboats and omnibuses. Like its rival in commerce, Georgetown, it can look back upon the vicissitudes of over one hundred years. That it was early a place of some note, is shown by the fact, that five Colonial Governors met here by appointment in 1775, to take measures with General Braddock respecting his expedition to the West, and the said expedition started from this place. But the reminiscences which the people of Alexandria mostly cherish are those which associate their town with the domestic attachments and habits of General Washington, in whose letters may be found a number of kindly allusions to his friends residing in this town. His friendly interest was manifested on various occasions, and especially so by bequeathing to the inhabitants a legacy of £1,000 for a free Public School. The stranger in Alexandria is still pointed to the

Church of which he was a Vestryman, to the pew which customarily occupied, and many striking memorials of his life are preserved with care.

It is also supplied with the somewhat peculiar attraction for a southern City, of a Museum. It comprises many personal relics of General Washington, and also a large and valuable collection of specimens in Natural History. Its other attractions are interesting but not especially peculiar.

The town was originally called Belhaven, and is very handsomely situated in the bottom of a valley. The streets are laid out on the plan of Philadelphia, crossing each other at right angles.

In making an observation from the town, the eye of an observer is terminated in every direction by lofty and verdant hills, to the north he sees the city of Washington, the Capitol with its beautiful columns, white walls and towering dome forming a most conspicuous object; to the south the broad and majestic expanse of the Potomac opens upon him, with Fort Washington in the distance, conspiring to render a visit to this ancient city a very agreeable one to the sojourner in Washington.

MOUNT VERNON.

OF all the spots associated with the National Metropolis, Mount Vernon is beyond all question the most interesting and attractive. It is situated on the southern branch of the Potomac, fifteen miles from Washington and eight from Alexandria. Heretofore the most usual mode of visiting it has been by Steamboat to Alexandria and the balance of the way by carriage, but within the past year a Steamboat line has been established directly to the spot itself. The entire plantation contains several hundred acres of land; and the mansion is of wood, two stories high, ninety-six feet in length, and with a portico extending the entire length. The Central part of the house was built by Lawrence Washington, brother to the General, but the wings were added by the General himself, and the whole named by him after the famous Admiral Vernon, under whom Lawrence Washington had served. It occupies an elevated position from which may be seen a reach of some twenty or thirty miles of the noble Potomac, extending both to the eastward and to the westward. The Ladies' Mount Vernon Association now holds this property in trust. The

trees which surround the house are quite numerous, and those which are known to have been planted by General Washington have been carefully preserved, and are objects of great interest to the visitors. The Library room of the mansion remains very much as when occupied by the Father of his Country. Beautiful walks are spread out in every direction, but terminate at a summer house which commands a charming prospect of the neighboring river. On a hill side some two hundred yards west of the summer house, and thirty yards from the mansion itself, is situated the vault where repose the remains of Washington. The lid of his Sarcophagus is wrought with the arms of his Country, and his only epitaph his name;—and what an epitaph is that? By his side in a corresponding tomb are the ashes of “Martha, consort of Washington.” When La Fayette the noble and well tried friend of Washington was in this country in 1825, he visited the tomb, descended alone into the vault and was melted to tears, and as he was about to depart, Mr. Custis who had accompanied him to the spot presented him with a ring containing some of the hair of his illustrious friend. La Fayette examined the mansion with great interest, and among the relics of the place, discovered the Key of the

Bastile, which had been sent to Washington many years before by himself, and which continues to be one of the attractions of the place.

To one accustomed to the plantation system and habits of Virginia, this estate may have much in common with others; but to persons unused to this economy, the whole is new and striking. Of things peculiar to the place, are a low rampart of brick, now partly overgrown, which Washington had built around the front of the house, and an under ground passage leading from the bottom of a dry well, and coming out by the river side at the foot of the mount. On the west side of the house are two gardens, a greenhouse, and—the usual accompaniments of a plantation—seed-houses, tool-houses, and cottages for the negroes—things possessing no particular interest, except because they were standing during Washington's life, and were objects of his frequent attention. Along the walls of the room hang engravings, which are mostly battle or hunting pieces. Among them will be noticed a print of Bunker Hill, but none of any battle in which Washington himself was engaged. The north room was built by Washington for a dining room, and for the meeting of his friends and political visitors. The furniture of the room is just as when he left it, and

leads one back to the days when there were met within these walls the great men of that generation who carried the States through the Revolution, laid the foundations of the government, and administered it in its purer days. The rooms of the house are spacious, and there is something of elegance in their arrangement; yet the whole is marked by great simplicity. All the regard one could wish, seems to have been shown to the sacredness of these public relics, and all things have been kept very nearly as Washington left them. Money made in the stocks can purchase the bedizenry of our city drawing-rooms; but these elevating associations, which no gold can buy, no popular favor win, which can only be inherited, these are the heir-looms, the traditionary titles and pensions, inalienable, not conferred, which a republic allows to the descendants of her great servants.

BLADENSBURG.

A village on the turnpike road, also on the Washington Branch of the Baltimore and Ohio railroad leading from Washington to Baltimore, about six miles northeastwardly of this city. Before the revolution it had a considerable amount of trade, but its commercial importance has long since departed. The name of Bladensburg is recorded in the annals of American history, and its present attractions are the fields where a famous victory was won, or rather a bloody battle was fought. It is also celebrated as the Congressional duelling ground, where De- catur and other smaller men have fallen to satisfy a sanguinary code of honor.

FORT WASHINGTON.

On a high eminence on the Maryland side of the Potomac, about midway between Alexandria and Mount Vernon, is Fort Washington, giving protection to the District from an enemy from the sea. The steamers running to Mount Vernon, stop at this place on their regular trips, allowing an opportunity to passengers to visit it.

JUST PUBLISHED :

ETIQUETTE IN WASHINGTON.

Bohn's Manual of Etiquette in Washington and the other Cities of the Union, just issued from the press by Mr. Casimir Bohn, of this city, is at once an elegantly gotten up little volume and a most judicious work, of rare condensation and accuracy, and very happily and gracefully expressed withal. It will doubtless be valuable for all who desire to know the ways of what Lady Dooberly in the play calls the "polite circles."—*National Intelligencer*.

FINE PORTRAITS.

The undersigned most respectfully informs heads of departments, members of Congress, clerks, &c., that he has made arrangements with the most skilful *artists* in the United States to publish Portraits, either on *steel* or on *stone*, on the most reasonable terms, and at the shortest notice, by addressing him through the post-office or at the Capitol, to

C. BOHN.

The following portraits have lately been published:—Gen. Lewis Cass, taken from life, by Chas. Fendrick. (This is the only likeness in existence taken from life. Hon. Lynn Boyd, Speaker of the House of Representatives; a fine likeness of the President of the United States, Franklin Pierce; Hon. James Buchanan, Hon. J. C. Breckinridge, Hon. Howell Cobb, of Georgia.

PLANS

OF THE

SENATE AND HOUSE OF REPRESENTATIVES,

Showing the No. of Seats of Members in the Senate and House of Representatives, with their residences in the City of Washington and Standing Committees of the House of Representatives.

For sale in the Capitol at the *Book Stand*.
