

Geognostic and Geographic Situations.

It occurs along with red cobalt-ochre, copper-nickel, grey copper-ore, copper-glance or vitreous copper-ore, azure copper-ore, sparry ironstone, quartz, and calcareous-spar.

It is found at St Agnes in Cornwall; Schneeberg and Johanngeorgenstadt in Saxony; and Joachimsthal in Bohemia; but is a rare mineral.

Observation.

It has been confounded with green iron-earth, from which it is well distinguished not only by its external aspect, but by its accompanying minerals.

ORDER XIII.
