

ADVERTISEMENT.

THIS treatise contains an Explanation of the External Characters of Minerals and of the language which I have employed in the two first volumes of my System of Mineralogy. The prefixed Tabular View I received from WERNER, and published some time ago*, but now incorporate it in this treatise, with the addition of the corresponding terms in German, French, and Latin.

The doctrine of *Oryctometry*, of which HAUY has given so interesting an account in his Treatise on Mineralogy, will be fully illustrated in a subsequent work.

ROSLIN,
November 20, 1805.

* Tabular View of the External Characters of Minerals, for the use of students of Oryctognosy. 8vo. 1804.
