

principal parts of the Science of Mineralogy, with the discoveries and improvements which have been made, of late years, on the Continent, and with such as I could add from my own industry and knowledge; and I hope, I have fully illustrated the importance and utility, which this Science so justly claims.

To improve this Work in proportion as my knowledge may increase, will be my future endeavour. In this, I intend to follow the plan, of which, I have given a sketch in the Appendix to this Volume, and of which, the Continuation shall follow in the form of a Supplement. This Continuation I shall publish from time to time, in Numbers, according to the advancements and discoveries which may be made in the
Science;
