## ROUCH'S RAPID GELATINE PLATES

Will be found to possess the greatest rapidity, and are unequalled for Instantaneous Landscape and Studio Work. Full directions with each packet.

Testimonial from G. C. WHITFIELD, Esq., Firm of Lock and Whitfield, April 2nd, 1880.

"The Gelatine Plates that you sent me have quite converted me to the use of Dry Plates. I had previously tried those of the first makers, but I have found yours alone give perfectly satisfactory results; they are very rapid, the development is easy, the shadows remaining clear to the last, and the density is sufficient without after intensification. Considerable latitude is allowable in time of exposure. I forward you prints from eight different negatives taken a few days since at Mr. Gladstone; time being very limited, various exposures were given, but you will see that they are all equally good, and not to be distinguished from prints from good wet plates. If you think my opinion of any value, you are quite at liberty to publish it."
