

THE WOODBURY PERMANENT PHOTOGRAPHIC PRINTING COMPANY

UNDERTAKE **Printing** in the best manner, by every kind of PERMANENT and PHOTO-MECHANICAL Process, particularly in

WOODBURYTYPE, COLLOTYPE, AND CARBON.

WOODBURYTYPE—as worked by them—maintains its position as first amongst Photo-Mechanical Processes. It is admitted even by those who have made Collotype a speciality, that for the production of Portraits, and for Illustrations of Art Manufactures, Machinery, &c., &c., the Woodbury Process far surpasses the Collotype. In the hands of the Woodbury Company this is strictly correct, Portraits, especially, produced by them not being distinguishable from the best silver prints.

N.B.—Reversed Negatives are not Required.

COLLOTYPE or **ALBERTYPE** is of limited utility, and is seldom employed where the Woodbury Process is known. It is, however, suitable for outline subjects, such as Copies of Maps, Plans, &c., &c.

CARBON—both by Single and Double Transfer—is worked with great success by the Woodbury Company, and, although business in this department is constantly increasing, Orders continue to be executed with the **utmost promptitude**.

ENLARGEMENTS IN CARBON,

On the Woodbury Company's specially-prepared Tissue, continue to receive the highest praise.

THE POPULAR SIZE, ON 24×18 PLATE, FIFTEEN SHILLINGS.

FINISHING IN MONOCHROME, OIL, AND WATER COLOUR.

Price Lists and all Information on Application,
