

STEEL TUBES!

This photograph demonstrates in a striking way how large is our range of steel tubes. The "filigree" is contained in an outer tube 25 in. diameter, and the pattern is made up of 8,050 separate pieces of Accles & Pollock tube.

Little-big 'uns and Big-little 'uns

There was a time—though it's over thirty years ago,—when a new workman at Accles & Pollock's factory used to say, in describing the four sizes of steel tubes then made, "Well Gaffer, them are the big 'uns, them are the little 'uns, them are the little big 'uns, and them are the big little 'uns." We've grown a bit since then; tubes are now measured by the thousandth of an inch, and we have

given up trying to count the number of sizes we make. But it may give you some idea when we tell you that the illustration above is not of a delicate piece of lace, but a design made up of 8,050 separate pieces of Accles & Pollock steel tubes. We like to think we have a shape for every job—including yours—but if we haven't, we are willing to add still another!
