

TRONIA MONTANA

The first of the specimens is a small, dark, rounded object, possibly a seed or a fruit, found in the same locality as the other specimens. It is very similar in appearance to the other specimens, but is much smaller and more rounded. It is also very dark in color, almost black, and has a smooth surface. It is found in the same locality as the other specimens, and is also very similar in appearance to the other specimens.
